Test Conditions
The stated performance is initial (data taken after 30 minutes of operation), based on the following conditions:

32,000 ppm NaCl  
800 psi (5.5 MPa) Applied Pressure  
77 °F (25 °C) Operating Temperature  
10% Permeate Recovery  
6.5 - 7.0 pH Range

Notice: Permeate flow for individual elements may vary + or - 15 percent. Membrane active area may vary +/-4%. Element weight may vary. All membrane elements are supplied with a brine seal, interconnector, and o-rings. Elements are enclosed in a sealed polyethylene bag containing less than 1.0% sodium metabisulfite solution, and then packaged in a cardboard box.

†When tested at standard test conditions with 5.0ppm Boron in feed solution.
