Process pressure measurement

Pressure transmitter with ceramic and metallic measuring cells

Applications

The device is used for the following measuring tasks:

- Absolute pressure and gauge pressure measurement in gases, steams or liquids in all areas of process engineering and process measurement technology
- Level, volume or mass measurements in liquids
- High process temperatures
 - up to 150 °C (302 °F) without diaphragm seal
 - up to 400 °C (752 °F) with typical diaphragm seals
- High pressures up to 700 bar (10 500 psi)
- Low-energy version with voltage output (1-5V DC), e.g. for operation on solar-operated control units (Remote Terminal Unit (RTU))

Your benefits

- Very good reproducibility and long-term stability
- High reference accuracy up to $\pm 0.025\%$
- Turn down up to 100:1, higher on request
- Used for process pressure monitoring up to SIL 3, certified to IEC 61508 by TÜV SÜD
- High level of safety during operation thanks to function monitoring from the measuring cell to the electronics
- Easy electronics replacement guaranteed with HistoROM®/M-DAT

Symbols used

Safety symbols

Symbol	Meaning
	DANGER! This symbol alerts you to a dangerous situation. Failure to avoid this situation will result in serious or fatal injury.
	WARNING! This symbol alerts you to a dangerous situation. Failure to avoid this situation may result in serious or fatal injury.
	CAUTION! This symbol alerts you to a dangerous situation. Failure to avoid this situation may result in minor or moderate injury.
	NOTE! This symbol contains information on procedures and other circumstances that do not result in personal injury.

Electrical symbols

Symbol	Meaning	Symbol	Meaning
	Protective ground connection A terminal that must be connected to ground prior to establishing any other connections.		Ground connection A grounded terminal which, as far as the operator is concerned, is grounded via a grounding system.

Symbols for certain types of Information

Symbol	Meaning
	Permitted Procedures, processes or actions that are permitted.
	Preferred Procedures, processes or actions that are preferred.
	Forbidden Procedures, processes or actions that are forbidden.
	Tip Indicates additional information.

Safety Instructions (XA)

See the "Safety instructions" section →  135

Terms and abbreviations

Item	Term/abbreviation	Explanation
1	OPL	The OPL (overpressure limit) for the measuring device depends on the lowest-rated element, with regard to pressure, of the selected components, i.e. the process connection has to be taken into consideration in addition to the measuring cell. Also observe pressure-temperature dependency. For the relevant standards and additional information, see the "Pressure specifications" section → 51. The OPL may only be applied for a limited period of time.
2	MWP	The MWP (maximum working pressure) for the sensors depends on the lowest-rated element, with regard to pressure, of the selected components, i.e. the process connection has to be taken into consideration in addition to the measuring cell. Also observe pressure-temperature dependency. For the relevant standards and additional information, see the "Pressure specifications" section → 51. The maximum working pressure may be applied at the device for an unlimited period. The maximum working pressure can also be found on the nameplate.
3	Maximum sensor measuring range	Span between LRL and URL This sensor measuring range is equivalent to the maximum calibratable/adjustable span.
4	Calibrated/adjusted span	Span between LRV and URV Factory setting: 0 to URL Other calibrated spans can be ordered as customized spans.
p	-	Pressure
-	LRL	Lower range limit
-	URL	Upper range limit
-	LRV	Lower range value
-	URV	Upper range value
-	TD (turn down)	Turn down Example - see the following section.

Turn down calculation

- 1 Calibrated/adjusted span
- 2 Zero point-based span
- 3 URL sensor

Example

- Sensor:10 bar (150 psi)
- Upper range value (URL) = 10 bar (150 psi)

Turn down (TD):

$$TD = \frac{URL}{|URV - LRV|}$$
$$TD = \frac{10 \text{ bar (150 psi)}}{|5 \text{ bar (75 psi)} - 0 \text{ bar (0 psi)}|} = 2$$

In this example, the TD is 2:1.
This span is based on the zero point.

- Calibrated/adjusted span: 0 to 5 bar (0 to 75 psi)
- Lower range value (LRV) = 0 bar (0 psi)
- Upper range value (URV) = 5 bar (75 psi)

Field of application

- Gauge pressure and absolute pressure
- Level

Process connections

PMC71:

- Thread
- EN flanges DN 25 – DN 80
- ANSI flanges 1" – 4"
- JIS flanges 50 A – 100 A

PMP71:

- Thread
- DN 25 – DN 80
- ASME 1 ½" – 4"
- JIS 25 A – 100 A
- Oval flange adapters
- Prepared for diaphragm seal mount

PMP75:

Wide range of diaphragm seals

Measuring ranges

- PMC71: From –100/0 to 100 mbar (–1.5/0 to 1.5 psi) to –1/0 to 40 bar (–15/0 to 600 psi)
- PMP71: From –400/0 to 400 mbar (–6/0 to 6 psi) to –1/0 to 700 bar (–15/0 to 10500 psi)
- PMP75: From –400/0 to 400 mbar (–6/0 to 6 psi) to –1/0 to 400 bar (–15/0 to 6000 psi)

OPL

- PMC71: max. 60 bar (900 psi)
- PMP71: max. 1 050 bar (15 750 psi)
- PMP75: max. 600 bar (9 000 psi)

Process temperature range (temperature at process connection)

- PMC71: -25 to +125 °C (-13 to +257 °F)
-20 to +150 °C (-4 to +302 °F) (High-temperature version, see Product Configurator "Additional option 1" or 110 "Additional option 2" section, option "T")
- PMP71: -40 to +125 °C (-40 to +257 °F)
- PMP75: -70 to +400 °C (-94 to +752 °F)
(depending on the filling oil)

Ambient temperature range

- Without LCD display: up to -60 to +85 °C (-76 to +185 °F)
- With LCD display: -20 to +70 °C (-4 to +158 °F)
(extended temperature application range -60 to +85 °C (-76 to +185 °F) with limitations in optical properties, such as display speed and contrast)
- Separate housing: -20 to +60 °C (-4 to +140 °F)
- PMP75: Diaphragm seal systems depending on the version

Reference accuracy

- PMC71: Up to ±0.05% of the set span
PLATINUM version: up to ±0.025 % of the set span
- PMP71: Up to ±0.05% of the set span
PLATINUM version: up to ±0.025 % of the set span
- PMP75: Up to ±0.075% of the set span

Supply voltage

Supply voltage non-Ex

- 4 to 20 mA HART: 10.5 to 45 V DC
- 1-5V DC: 9 to 35 V DC
- PROFIBUS PA and FOUNDATION Fieldbus: 9 to 32 V DC

Supply voltage Ex ia

10.5 to 30 V DC

Supply voltage Ex d (1-5V DC)

9 to 35 V DC

Output

- 4 to 20 mA with superimposed HART protocol
- 1-5V DC
- PROFIBUS PA
- FOUNDATION Fieldbus

Options

- Inspection certificate 3.1
- HistoROM®/M-DAT memory chip
- Separate housing
- PMP75: gold-coated process isolating diaphragm
- PMP71, PMP75: gold-rhodium coated process isolating diaphragm
- PMP71, PMP75: NACE-compliant materials

Specialties

- PMC71:
 - Metal-free measurement with PVDF connection
 - Special cleaning of the transmitter to remove paint-wetting substances, for use in paint shops
- PMP71:
 - Process connections with minimum oil volume
 - Gas-tight, elastomer-free
- PMP75:
 - Wide range of diaphragm seals
 - For high medium temperatures
 - Process connections with minimum oil volume
 - Completely welded versions

Measuring principle

Devices with ceramic process isolating diaphragm (Ceraphire®)

A0020465

- 1 Air pressure (gauge pressure sensors)
- 2 Ceramic substrate
- 3 Electrodes
- 4 Ceramic process isolating diaphragm

The ceramic sensor is an oil-free sensor, i.e. the process pressure acts directly on the robust ceramic process isolating diaphragm and causes it to deflect. A pressure-dependent change in capacitance is measured at the electrodes of the ceramic substrate and the process isolating diaphragm. The measuring range is determined by the thickness of the ceramic process isolating diaphragm.

Advantages:

- Guaranteed overload resistance up to 40 times the nominal pressure (see "OPL" column in table) → 13)
- The ultrapure 99.9% ceramic (Ceraphire®, see also www.endress.com/ceraphire) ensures:
 - Extremely high chemical durability
 - High mechanical durability
- Suitable for vacuums
- Secondary containment for enhanced integrity
- Process temperatures up to 150 °C (302 °F)

Devices with metallic process isolating diaphragm

A0016448

- 1 Silicon measuring element, substrate
- 2 Wheatstone bridge
- 3 Channel with fill fluid
- 4 Metal process isolating diaphragm

PMP71

The process pressure deflects the metal process isolating diaphragm of the sensor and a fill fluid transfers the pressure to a Wheatstone bridge (semiconductor technology). The pressure-dependent change in the bridge output voltage is measured and evaluated.

Advantages:

- Can be used for process pressures up to 700 bar (10 500 psi)
- High long-term stability
- Guaranteed overload resistance up to 4 times the nominal pressure
- Secondary containment for enhanced integrity
- Significantly reduced thermal effect e.g. compared to diaphragm seal systems with capillaries

PMP75

The operating pressure acts on the process isolating diaphragm of the diaphragm seal and is transferred to the process isolating diaphragm of the sensor by a diaphragm seal fill fluid. The process isolating diaphragm is deflected and a fill fluid transfers the pressure to a resistance measuring bridge. The pressure-dependent change in the bridge output voltage is measured and evaluated.

Advantages:

- Depending on the version, can be used for process pressures up to 400 bar (6 000 psi) and for extreme process temperatures
- High long-term stability
- Guaranteed overload resistance up to 4 times the nominal pressure
- Secondary containment for enhanced integrity

Product design

Level measurement (level, volume and mass):

A0020466

h Height (level)
p Pressure
ρ Density of the medium
g Gravitation constant

Your benefits

- Selection of the level operating mode which is optimum for your application in the device software
- Volume and mass measurements in any vessel shape by means of a freely programmable characteristic curve
- Choice of diverse level units with automatic unit conversion
- A customized unit can be specified.
- Has a wide range of uses, e.g.
 - for foam formation
 - in vessels with agitators or screen fittings
 - for liquid gases

Applications suitable for custody transfer measurement

The Parts Certificate is issued on the basis of the following standards:

- WELMEC guide 8.8 "General and Administrative Aspects of the Voluntary System of Modular Evaluation of Measuring instruments under the MID".
- OIML R117-1 Edition 2007 (E) "Dynamic measuring systems for liquids other than water".
- EN 12405-1/A1 Edition 2006 "Gas meters – Conversion devices – Part 1: Volume conversion".

Communication protocol

- 4 to 20 mA with HART communication protocol
- PROFIBUS PA
 - Endress+Hauser devices meet the requirements specified by the FISCO model.
 - Due to a low current consumption of $13 \text{ mA} \pm 1 \text{ mA}$, the following number of devices can be operated on one bus segment if installing as per FISCO: up to 7 devices for Ex ia, CSA IS and FM IS applications or up to 27 devices for all other applications e.g. in non-hazardous areas, Ex nA etc. Further information on PROFIBUS PA can be found in Operating Instructions BA00034S "PROFIBUS DP/PA: Guidelines for planning and commissioning" and in the PNO Guideline.
- FOUNDATION Fieldbus
 - Endress+Hauser devices meet the requirements specified by the FISCO model.
 - Due to a low current consumption of $15.5 \text{ mA} \pm 1 \text{ mA}$, the following number of devices can be operated on one bus segment if installing as per FISCO: up to 6 devices for Ex ia, CSA IS and FM IS applications or up to 24 devices for all other applications e.g. in non-hazardous areas, Ex nA etc. Further information on FOUNDATION Fieldbus, such as requirements for bus system components, can be found in Operating Instructions BA00013S "FOUNDATION Fieldbus Overview".

Input

Measured variable

Measured process variables

- Absolute pressure
- Gauge pressure

Measuring range

1) The vacuum resistance applies to the measuring cell under reference operating conditions

2) Product Configurator, order code for "Sensor range; sensor over pressure limit"

3) By default, the device is set to a lower sensor measuring range of 0 bar. Please specify when ordering if the lower sensor measuring range is to be set to a different default value.

4) Max. WP (working pressure) for gas and liquid applications suitable for calibration to regulatory standards

Output

Output signal

- 4 to 20 mA with superimposed digital communication protocol HART, 2-wire
- 1-5V DC, 3-wire
- Digital communication signal PROFIBUS PA (Profile 3.0), 2-wire
 - Signal coding: Manchester Bus Powered (MBP): Manchester II
 - Transmission rate: 31.25 KBit/s voltage mode
- Digital communication signal FOUNDATION Fieldbus, 2-wire
 - Signal coding: Manchester Bus Powered (MBP): Manchester II
 - Transmission rate: 31.25 KBit/s voltage mode

Output	Internal + LCD	External + LCD	Internal
			
	Option ¹⁾		
4 to 20mA HART	B	A	C
4 to 20mA HART, Li=0	E	D	F
1-5V DC	H	G	-
PROFIBUS PA	N	M	O
FOUNDATION Fieldbus	Q	P	R

1) Product Configurator, order code for "Display, operation:"

Signal range

4 to 20 mA

3.8 mA to 20.5 mA

1-5V DC

0.95 to 5.125 V

Signal on alarm

4 to 20 mA HART

As per NAMUR NE43.

- Max. alarm: can be set from 21 to 23 mA (factory setting: 22 mA)
- Hold measured value: last measured value is held
- Min. alarm: 3.6 mA

1-5V DC

- Max. alarm: can be set from 5.25 to 5.75 V
- Min. Alarm: 0.9 V

PROFIBUS PA

As per NAMUR NE43.

Can be set in the Analog Input Block.

Options:

- Last Valid Out Value (factory setting)
- Fail Safe Value
- Status bad

FOUNDATION Fieldbus

As per NAMUR NE43.

Can be set in the Analog Input Block.

Options:

- Last Good Value
- Fail Safe Value (factory setting)
- Wrong Value

Load

4 to 20 mA HART

In order to guarantee sufficient terminal voltage in two-wire devices, a maximum load resistance R (including line resistance) must not be exceeded depending on the supply voltage U_0 of the supply unit. In the following load diagrams, observe the position of the jumper and the explosion protection:

A0020467

A Jumper for 4 to 20 mA test signal set to "Non-test" position

B Jumper for 4 to 20 mA test signal set to "Test" position

1 Power supply 10.5 (11.5) to 30 V DC for 1/2 G, 1 GD, 1/2 GD, FM IS, CSA IS, IECEx ia, NEPSI Ex ia

2 Power supply 10.5 (11.5) to 45 V DC for devices for non-hazardous areas, 1/2 D, 1/3 D, 2 G Ex d, 3 G Ex nA, FM XP, FM DIP, FM NI, CSA XP, CSA dust ignition-proof, NEPSI Ex d

3 Power supply 11 (12) to 45 V DC for PMC71, Ex d[ia], NEPSI Ex d[ia]

4 R_{Lmax} maximum load resistance

U Supply voltage

When operating via a handheld terminal or via a PC with an operating program, a minimum communication resistor of 250 Ω must be taken into account.

1-5V DC

The load must be at least 100 kΩ.

Damping

A damping affects all outputs (output signal, display):

- via local display, handheld terminal or PC (handheld terminal or PC not for 1-5V DC) with operating program, continuous from 0 to 999 s
- Also for HART and PROFIBUS PA: Via DIP switch on the electronic insert, switch position "on" = set value and "off"
- 1-5V DC: via DIP switch on electronic insert switch position "on" = set value and "off"
- Factory setting: 2 s

Alarm current

Transducer Blocks

Block	Contents	Output values
TRD1 Block	Contains all parameters related to the measurement	■ Pressure or level (channel 1) ■ Process temperature (channel 2)
Service Block	Contains service information	■ Pressure after damping (channel 3) ■ Pressure peakhold indicator (channel 4) ■ Counter for max. pressure transgressions (channel 5)
Diagnostic block	Contains diagnostic information	Error code via DI channels (channel 0 to 16)
Display block	Contains parameters to configure the onsite display	No output values

Function blocks

Block	Contents	Number Blocks	Execution time		Functionality	
			Device Revision 6	Device Revision 7	Device Revision 6	Device Revision 7
Resource Block	The Resource Block contains all the data that uniquely identify the device. It is an electronic version of a nameplate of the device.	1			enhanced	enhanced
Analog Input Block 1 Analog Input Block 2	The AI Block receives the measuring data from the Sensor Block, (selectable via a channel number) and makes the data available to other function blocks at its output. Enhancement: Digital outputs for process alarms, fail safe mode	2	45 ms	45 ms (without trend and alarm reports)	enhanced	enhanced
Digital Input Block	This block contains the discrete data of the Diagnose Block (selectable via a channel number 0 to 16) and provides them for other blocks at the output.	1	40 ms	30 ms	standard	enhanced
Digital Output Block	This block converts the discrete input and thus initiates an action (selectable via a channel number) in the DP Flow Block or in the Service Block. Channel 1 resets the counter for max. pressure transgressions.	1	60 ms	40 ms	standard	enhanced
PID Block	This block is used as a proportional-integral-derivative controller and can be used universally for closed-loop-control in the field. It enables cascade mode and feedforward control. Input IN can be indicated on the display. The selection is performed in the Display Block (DISPLAY_MAIN_LINE_CONTENT).	1	120 ms	70 ms	standard	enhanced
Arithmetic Block	This block is designed to permit simple use of popular measurement math functions. The user does not have to know how to write equations. The math algorithm is selected by name, chosen by the user for the function to be performed.	1	50 ms	40 ms	standard	enhanced
Input Selector Block	The Input Selector Block facilitates the selection of up to four inputs and generates an output based on the configured action. This block normally receives its inputs from AI Blocks. The block enables the selection of maximum, minimum, average and 'first good' values. Inputs IN1 to IN4 can be shown on the display. The selection is performed in the Display Block (DISPLAY_MAIN_LINE_CONTENT).	1	35 ms	35 ms	standard	enhanced
Signal Characterizer Block	The Signal Characterizer Block has two sections, each with an output value that is a non-linear function of the input value. The non-linear function is generated by a single look-up table with 21 arbitrary x-y pairs.	1	30 ms	40 ms	standard	enhanced
Integrator Block	The Integrator Block integrates a variable as a function of the time or accumulates the counts from a Pulse Input Block. The block may be used as a totalizer that counts up until reset or as a batch totalizer that has a setpoint, where the integrated or accumulated value is compared to pre-trip and trip settings, generating a binary signal when the setpoint is reached.	1	35 ms	40 ms	standard	enhanced
Analog Alarm Block	This block contains all process alarm conditions (working like a comparator) and represents them at the output.	1	35 ms	35 ms	standard	enhanced

Additional function block information:

Instantiate Function Block	JA	JA
Number of additional instantiatable function blocks	11	5

Power supply

⚠ WARNING

Electrical safety is compromised by an incorrect connection!

- ▶ When using the measuring device in hazardous areas, installation must also comply with the corresponding national standards and regulations and the Safety Instructions or Installation or Control Drawings → 135.
- ▶ All explosion protection data are given in separate Ex documentation which is available upon request. The Ex documentation is supplied as standard with all devices approved for use in explosion hazardous areas → 135.
- ▶ Devices with integrated overvoltage protection must be grounded → 28.
- ▶ Protective circuits against reverse polarity, HF influences and overvoltage peaks are integrated.

Electronic version	Jumper for 4 to 20 mA test signal in "Test" position (delivery status)	Jumper for 4 to 20 mA test signal in "Non-test" position
Version for non-hazardous area	11.5 to 45 V DC	10.5 to 45 V DC
Intrinsically safe	11.5 to 30 V DC	10.5 to 30 V DC
■ Other types of protection ■ Devices without a certificate	11.5 to 45 V DC (Versions with 35 V DC plug-in connector)	10.5 to 45 V DC (Versions with 35 V DC plug-in connector)

Jumper position for test signal	Description
A0019992	■ Measurement of 4 to 20 mA test signal via the positive and test terminal: possible. (Thus, the output current can be measured without interruption via the diode.) ■ As-delivered state ■ Minimum supply voltage: 11.5 V DC
A0019993	■ Measurement of 4 to 20 mA test signal via the positive and test terminal: not possible. ■ Minimum supply voltage: 10.5 V DC

24

PROFIBUS PA

- Version for non-hazardous areas: 9 to 32 V DC
- Ex ia:
 - Installation in bus system according to FISCO model: $U_i=17.5$ V DC
 - Point-to-point installation: $U_i = 24$ V DC

FOUNDATION Fieldbus

- Version for non-hazardous areas: 9 to 32 V DC
- Ex ia:
 - Installation in bus system according to FISCO model: $U_i=17.5$ V DC
 - Point-to-point installation: $U_i = 24$ V DC

Current consumption

- 1-5V DC:
 - 9 V = 1.8 mA
 - 35 V = 0.8 mA
- PROFIBUS PA: 13 mA $\pm$ 1 mA, switch-on current corresponds to IEC 61158-2, Clause 21
- FOUNDATION Fieldbus: 15.5 mA $\pm$ 1 mA, switch-on current corresponds to IEC 61158-2, Clause 21

Electrical connection**PROFIBUS PA**

The digital communication signal is transmitted to the bus via a two-wire connection. The bus also provides the power supply. For further information on the network structure and grounding and for further bus system components such as bus cables, see the relevant documentation, e.g. Operating Instructions BA00034S "PROFIBUS DP/PA: Guidelines for planning and commissioning" and the PNO Guideline.

FOUNDATION Fieldbus

The digital communication signal is transmitted to the bus via a two-wire connection. The bus also provides the power supply. For further information on the network structure and grounding and for further bus system components such as bus cables, see the relevant documentation, e.g. Operating Instructions BA00013S "FOUNDATION Fieldbus Overview" and the FOUNDATION Fieldbus Guideline.

Terminals

- Supply voltage and internal ground terminal: 0.5 to 2.5 mm² (20 to 14 AWG)
- External ground terminal: 0.5 to 4 mm² (20 to 12 AWG)

Cable entries

Approval	Cable gland	Clamping range
Standard, II 1/2 G Ex ia, IS	Plastic M20x1.5	5 to 10 mm (0.2 to 0.39 in)
ATEX II 1/2 D, II 1/3 D, II 1/2 GD Ex ia, II 1 GD Ex ia, II 3 G Ex nA	Metal M20x1.5 (Ex e)	7 to 10.5 mm (0.28 to 0.41 in)

1-5V DC

The cable entries have a 1/2 FNPT thread. The connection on the customer's side is protected by a plastic connector. A cable gland is not envisaged.

For additional technical data, see section on housing →  53

- Degree of protection: IP68

Cable specification

HART

- Endress+Hauser recommends using shielded, twisted-pair two-wire cables.
- Cable outer diameter: 5 to 9 mm (0.2 to 0.35 in) depending on the cable entry used → 25

1-5V DC

- Endress+Hauser recommends using a shielded cable.
- Cable outer diameter: 5 to 9 mm (0.2 to 0.35 in) depending on the cable entry used → 25

Maximum cable length

The following table shows the tolerance of the voltage output for a representative cable with a length of up to 100 m (328 ft), a resistance of 18 Ohm/km and specification 18 AWG (cable cross-section 0.8 mm²).

Tolerance of voltage output at cable end	Length
0.5 mV	25 m (82 ft)
1 mV	50 m (164 ft)
1.5 mV	75 m (246 ft)
2 mV	100 m (328 ft)

PROFIBUS PA

Use a twisted, shielded twin-core cable, preferably cable type A.

 For further information on the cable specifications, see Operating Instructions BA00034S "PROFIBUS DP/PA: Guidelines for planning and commissioning", the PNO Guideline 2.092 PROFIBUS PA User and Installation Guideline" and IEC 61158-2 (MBP).

FOUNDATION Fieldbus

Use a twisted, shielded twin-core cable, preferably cable type A.

 For further information on the cable specifications, see Operating Instructions BA00013S "FOUNDATION Fieldbus Overview", FOUNDATION Fieldbus Guideline and IEC 61158-2 (MBP).

Start-up current	12 mA
Residual ripple	Without influence on 4 to 20 mA signal up to ±5% residual ripple within the permitted voltage range [according to HART hardware specification HCF_SPEC-54 (DIN IEC 60381-1)].
Overvoltage protection (optionally for HART, PROFIBUS PA and FOUNDATION Fieldbus)	■ Overvoltage protection: ■ Nominal functioning DC voltage: 600 V ■ Nominal discharge current: 10 kA ■ Surge current check $\hat{i} = 20$ kA satisfied as per DIN EN 60079-14: 8/20 μs ■ Arrester AC current check $I = 10$ A satisfied Ordering information: Product Configurator, order code for "Additional options 1" or Additional options 2", option "M" NOTICE Device could be destroyed! ► Devices with integrated overvoltage protection must be grounded.
Influence of power supply	≤0.0006 % of URL/1 V

Performance characteristics for measuring devices with ceramic process membrane

Response time	HART ■ Acyclic: min. 330 ms, typically 590 ms (depending on command # and number of preambles) ■ Cyclic (burst): min. 160 ms, typically 350 ms (depending on command # and number of preambles) PROFIBUS PA ■ Acyclic: approx. 60 ms to 70 ms (depending on Min. Slave Interval) ■ Cyclic: approx. 10 ms to 13 ms (depending on Min. Slave Interval) FOUNDATION Fieldbus ■ Acyclic: typically 100 ms (for standard bus parameter settings) ■ Cyclic: max. 20 ms (for standard bus parameter settings)
Reference operating conditions	■ As per IEC 62828-2 / IEC 60770 ■ Ambient temperature T_A = constant, in the range +22 to +28 °C (+72 to +82 °F) ■ Humidity ϕ = constant, in the range: 5 to 80 % RH $\pm$ 5 % ■ Ambient pressure p_U = constant, in the range: 860 to 1 060 mbar (12.47 to 15.37 psi) ■ Position of the measuring cell: horizontal $\pm 1^\circ$ ■ Input of LOW SENSOR TRIM and HIGH SENSOR TRIM for lower range value and upper range value ■ Span based on zero point ■ Membrane material PMC71: Al_2O_3 aluminum oxide ceramic FDA, ultrapure 99.9 % ■ Supply voltage: 24 V DC $\pm$ 3 V DC ■ Load with HART: 250 Ω ■ Turn down (TD) = URL/ URV - LRV
Total performance	The performance characteristics refer to the accuracy of the device. The factors that influence the accuracy can be divided into two groups ■ Total performance of device ■ Installation factors All of the performance characteristics meet the requirement of $\geq \pm 3$ sigma. The total performance of the device comprises the reference accuracy and the ambient temperature effect and is calculated using the following formula: $\text{Total performance} = \pm \sqrt{(E1)^2 + (E2)^2}$ $E1$ = Reference accuracy $E2$ = Temperature effect Calculation of $E2$: Temperature effect per $\pm 28^\circ\text{C}$ (50°F) (Corresponds to a range of -3 to $+53^\circ\text{C}$ ($+27$ to $+127^\circ\text{F}$)) $E2 = E2_M + E2_E$ $E2_M$ = Main temperature error $E2_E$ = Electronics error The values refer to the calibrated span.

Calculation of the total performance with the Endress+Hauser Applicator

Detailed inaccuracies, e.g. for other temperature ranges or the high-temperature version of the device can be calculated with the Applicator "[Sizing Pressure Performance](#)".

A0038927

Reference accuracy [E1]

Reference accuracy comprises the non-linearity [IEC 62828-1/DIN EN 61298-2] including the hysteresis [IEC 62828-1/DIN EN 61298-2] and the non-repeatability [IEC 62828-1/DIN EN 61298-2] in accordance with the limit point method as per [IEC 62828-1/DIN EN 60770-2]. Reference accuracy for standard up to TD 100:1, for platinum up to TD 5:1.

100 mbar (1.5 psi) sensor

- Standard: $TD \leq 10:1 = \pm 0.075 \%$; $TD > 10:1 = \pm 0.0075 \% \cdot TD$
- Platinum: $TD 1:1 = \pm 0.05 \%$; $TD > 1:1 = \pm 0.075 \%$

250 mbar (3.75 psi) sensor

- Standard: $TD \leq 10:1 = \pm 0.075 \%$; $TD > 10:1 = \pm 0.0075 \% \cdot TD$
- Platinum: $TD \geq 1:1 = \pm 0.05 \%$

400 mbar (6 psi) and 1 bar (15 psi) sensor

- Standard: $TD \leq 10:1 = \pm 0.05 \%$; $TD > 10:1 = \pm 0.005 \% \cdot TD$
- Platinum: $TD \geq 1:1 = \pm 0.035 \%$

2 bar (30 psi) sensor

- Standard: $TD \leq 10:1 = \pm 0.05 \%$; $TD > 10:1 = \pm 0.005 \% \cdot TD$
- Platinum: $TD 1:1 = \pm 0.025 \%$; $TD \geq 1:1 = \pm 0.035 \%$

4 bar (60 psi) sensor

- Standard: $TD \leq 10:1 = \pm 0.05 \%$; $TD > 10:1 = \pm 0.005 \% \cdot TD$
- Platinum: $TD \geq 1:1 = \pm 0.025 \%$

10 bar (150 psi) and 40 bar (600 psi) sensor

- Standard: $TD \leq 10:1 = \pm 0.05 \%$; $TD > 10:1 = \pm 0.005 \% \cdot TD$
- Platinum: $TD \geq 1:1 = \pm 0.035 \%$

Measuring uncertainty for small absolute pressure measuring ranges

The smallest extended uncertainty of measurement that can be delivered by our standards in the 0.001 to 35 mbar (0.0000145 to 0.5075 psi) range is 0.1 % of the reading + 0.004 mbar (0.000058 psi).

Temperature effect [E2]

E2_M - Main temperature error

The output changes due to the effect of the ambient temperature [IEC 62828-1/IEC 61298-3] with respect to the reference temperature [IEC 62828-1/DIN 16086]. The values specify the maximum error due to min./max. ambient or process temperature conditions.

100 mbar (1.5 psi), 250 mbar (3.75 psi) and 400 mbar (6 psi) sensor

- Standard: $\pm (0.07 \% \cdot TD + 0.038 \%)$
- Platinum: $\pm (0.07 \% \cdot TD + 0.038 \%)$

1 bar (15 psi), 2 bar (30 psi), 4 bar (60 psi), 10 bar (150 psi) and 40 bar (600 psi) sensor

- Standard: $\pm (0.065 \% \cdot TD + 0.02 \%)$
- Platinum: $\pm (0.065 \% \cdot TD + 0.02 \%)$

E2_E - Electronics error

- Analog output (4 to 20 mA): 0.05 %
- Digital output (HART/PA/FF): 0 %

Resolution	Current output: 1 µA
------------	----------------------

Total error	The total error of the device comprises the total performance and the long-term stability effect and is calculated using the following formula: Total error = total performance + long-term stability
-------------	---

Calculation of the total error with the Endress+Hauser Applicator

Detailed inaccuracies, e.g. for other temperature ranges or the high-temperature version of the device can be calculated with the Applicator "[Sizing Pressure Performance](#)".

A0038927

Calculation of the diaphragm seal error with the Endress+Hauser Applicator

Diaphragm seal errors are not taken into consideration. They are calculated separately in the Applicator "[Sizing Diaphragm Seal](#)".

A0038925

Long-term stability	The specifications refer to the upper range limit (URL).
---------------------	--

Gauge pressure sensors

- 1 year: $\pm 0.05\%$
- 5 years: $\pm 0.08\%$
- 10 years: $\pm 0.10\%$

Absolute pressure sensors

- 1 year: $\pm 0.05\%$
- 5 years: $\pm 0.15\%$
- 10 years: $\pm 0.20\%$

Response time T63 and T90

Dead time, time constant

Representation of dead time and time constant as per IEC62828-1:

A0019786

Dynamic behavior, current output

	Dead time (t_1)	Time constant T63 (t_2)	Time constant T90 (t_3)
Max.	90 ms	120 ms	276 ms

Dynamic behavior, digital output (HART electronics)

A typical burst rate of 300 ms results in the following behavior:

	Dead time (t_1)	Dead time (t_1) + Time constant T63 (t_2)	Dead time (t_1) + Time constant T90 (t_3)
Min.	250 ms	370 ms	436 ms
Max.	1050 ms	1170 ms	1236 ms

Reading cycle

- Acyclic: max. 3/s, typically 1/s (depending on command # and number of preambles)
- Cyclic (burst): max. 3/s, typically 2/s

The device offers the BURST MODE function for cyclic value transmission via the HART communication protocol.

Cycle time (update time)

Cyclic (burst): min. 300 ms

Dynamic behavior PROFIBUS PA

A typical PLC cycle time of 1 s results in the following behavior:

	Dead time (t_1)	Dead time (t_1) + Time constant T63 (t_2)	Dead time (t_1) + Time constant T90 (t_3)
Min.	125 ms	245 ms	311 ms
Max.	1325 ms	1445 ms	1511 ms

Read cycle (PLC)

- Acyclic: typically 25/s
- Cyclic: typically 30/s (dependent on the number and type of function blocks used in a closed-control loop)

Cycle time (update time)

Min. 200 ms

The cycle time in a bus segment in cyclic data communication depends on the number of devices, on the segment coupler used and on the internal PLC cycle time. A new measured value can be determined up to five times a second.

Dynamic behavior FOUNDATION Fieldbus

A typical configuration for the macro cycle time (host system) of 1 s results in the following behavior:

	Dead time (t_1)	Dead time (t_1) + Time constant T63 (t_2)	Dead time (t_1) + Time constant T90 (t_3)
Min.	135 ms	255 ms	321 ms
Max.	1135 ms	1255 ms	1321 ms

Reading cycle

- Acyclic: typically 10/s
- Cyclic: max. 10/s (dependent on the number and type of function blocks used in a closed-control loop)

Cycle time (update time)

Cyclic: min. 100 ms

Installation factors**Influence of installation position**

≤ 0.18 mbar (0.003 psi). Device rotated 180°, process connection pointing upwards.

A position-dependent zero point shift can be corrected. Please refer to the "Commissioning → Position adjustment" section of the Operating Instructions.

Different tightening torques (e.g. for Clamp or Varivent connections) can merely cause a shift in the zero point. This effect is corrected by position adjustment during commissioning.

Warm-up period

- 4 to 20 mA HART: < 10 s
- PROFIBUS PA: 6 s
- FOUNDATION Fieldbus: 50 s

Performance characteristics for measuring devices with metal process membrane

Response time	HART ■ Acyclic: min. 330 ms, typically 590 ms (depending on command # and number of preambles) ■ Cyclic (burst): min. 160 ms, typically 350 ms (depending on command # and number of preambles) PROFIBUS PA ■ Acyclic: approx. 60 ms to 70 ms (depending on Min. Slave Interval) ■ Cyclic: approx. 10 ms to 13 ms (depending on Min. Slave Interval) FOUNDATION Fieldbus ■ Acyclic: typically 100 ms (for standard bus parameter settings) ■ Cyclic: max. 20 ms (for standard bus parameter settings)
Reference operating conditions	■ As per IEC 62828-2 / IEC 60770 ■ Ambient temperature T_A = constant, in the range +22 to +28 °C (+72 to +82 °F) ■ Humidity ϕ = constant, in the range: 5 to 80 % RH $\pm$ 5 % ■ Ambient pressure p_U = constant, in the range: 860 to 1 060 mbar (12.47 to 15.37 psi) ■ Position of the measuring cell: horizontal $\pm 1^\circ$ ■ Input of LOW SENSOR TRIM and HIGH SENSOR TRIM for lower range value and upper range value ■ Span based on zero point ■ Membrane material PMP71/PMP75: AISI 316L (1.4435) or Alloy C ■ Filling oil PMP71/PMP75: silicone oil ■ Supply voltage: 24 V DC $\pm$ 3 V DC ■ Load with HART: 250 Ω ■ Turn down (TD) = URL/ URV - LRV
Total performance	The performance characteristics refer to the accuracy of the device. The factors that influence the accuracy can be divided into two groups ■ Total performance of device ■ Installation factors All of the performance characteristics meet the requirement of $\geq \pm 3$ sigma. The total performance of the device comprises the reference accuracy and the ambient temperature effect and is calculated using the following formula: $\text{Total performance} = \pm \sqrt{(E1)^2 + (E2)^2}$ $E1$ = Reference accuracy $E2$ = Ambient temperature effect Calculation of $E2$: Ambient temperature effect per $\pm 28^\circ\text{C}$ (50°F) (Corresponds to a range of -3 to $+53^\circ\text{C}$ ($+27$ to $+127^\circ\text{F}$)) $E2 = E2_M + E2_E$ $E2_M$ = Main temperature error $E2_E$ = Electronics error ■ The values apply to process membranes made of 316L (1.4435) ■ The values refer to the calibrated span.

Calculation of the total performance with the Endress+Hauser Applicator

Detailed inaccuracies, e.g. for other temperature ranges, can be calculated with the Applicator ["Sizing Pressure Performance"](#).

A0038927

Calculation of the diaphragm seal error with the Endress+Hauser Applicator

Diaphragm seal errors are not taken into consideration. They are calculated separately in the Applicator ["Sizing Diaphragm Seal"](#).

A0038925

Reference accuracy [E1]

Reference accuracy comprises the non-linearity [IEC 62828-1/DIN EN 61298-2] including the hysteresis [IEC 62828-1/DIN EN 61298-2] and the non-repeatability [IEC 62828-1/DIN EN 61298-2] in accordance with the limit point method as per [IEC 62828-1/DIN EN 60770-2]. Reference accuracy for standard up to TD 100:1, for platinum up to TD 5:1.

PMP71

	Max.	■ 400 mbar (6 psi) ■ ≥ 1 bar (15 psi)	1090	■ 1160 ■ 1125	■ 1206 ■ 1126
PMP75	Max.	PMP71 + influence of the diaphragm seal			

Reading cycle

- Acyclic: typically 10/s
- Cyclic: max. 10/s (dependent on the number and type of function blocks used in a closed-control loop)

Cycle time (update time)

Cyclic: min. 100 ms

Installation factors

Influence of installation position

PMP71: Device rotated 180°, process connection pointing upwards. The value is doubled for devices with inert oil.

- Process connection thread G 1 A, G 1 ½, G 2, 1 ½ MNPT, 2 MNPT, M 44x1.25, EN/DIN, ASME and JIS flanges: ≤ 10 mbar (0.15 psi).
- Process connection thread: G ½, ½ MNPT, JIS G ½, JIS R ½, M20x1.5: ≤ 4 mbar (0.06 psi).

A position-dependent zero point shift can be corrected. Please refer to the "Commissioning → Position adjustment" section of the Operating Instructions.

Different tightening torques (e.g. for Clamp or Varivent connections) can merely cause a shift in the zero point. This effect is corrected by position adjustment during commissioning.

Warm-up period

- 4 to 20 mA HART: < 10 s
- PROFIBUS PA: 6 s
- FOUNDATION Fieldbus: 50 s

Installation

General installation instructions

- For PMP75: →  120 "Installation instructions" section.
- A position-dependent zero point shift can be corrected directly at the device via operating keys, and also in hazardous areas in the case of devices with external operation. Diaphragm seals also shift the zero point, depending on the installation position →  120.
- The device housing can be rotated up to 380°.
- Endress+Hauser offers a mounting bracket for installing the device on pipes or walls →  42.
- Use flushing rings for flange and cell diaphragm seals if buildup or clogging can be expected at the diaphragm seal connection. The flushing ring can be fitted between the process connection and diaphragm seal. Material buildup in front of the process isolating diaphragm can be flushed away, and the pressure chamber vented, via the two lateral flushing holes.
- When measuring in media containing solids, such as dirty liquids, installing separators and drain valves is useful for capturing and removing sediment.
- Point the cable and connector downwards where possible to prevent moisture from entering (e.g. rain or condensation water).

Measuring arrangement for devices without diaphragm seals – PMC71, PMP71

Cerabar S devices without diaphragm seals are mounted in accordance with the same guidelines as a manometer (DIN EN 837-2). We recommend the use of shutoff devices and siphons. The orientation depends on the measuring application.

Pressure measurement in gases

Mount the Cerabar S with shutoff device above the tapping point so that any condensate can flow into the process.

Pressure measurement in vapors

Use siphons for pressure measurement in steam. The siphon reduces the temperature to almost ambient temperature. Fill the siphon with liquid before commissioning. Preferably mount the Cerabar S with the siphon below the tapping point.

Advantages:

- defined water column only causes minimal/negligible measured errors
- only minimal/negligible thermal effects on the device

Mounting above the tapping point is also possible. Observe the max. permitted ambient temperature of the transmitter!

Pressure measurement in liquids

Mount the Cerabar S with shutoff device below or at the same level as the tapping point.

Level measurement

- Mount the Cerabar S below the lowest measuring point.
- Do not install the device in the following positions: In the filling curtain, in the tank outlet or at a point in the vessel which could be affected by pressure pulses from an agitator or a pump.
- The calibration and functional test can be carried out more easily if you mount the device downstream from a shutoff device.

Measuring arrangement for devices with diaphragm seals – PMP75

→  120

Orientation

The orientation may cause a zero point shift.

This position-dependent zero point shift can be corrected directly at the device via the operating key, and also in hazardous areas in the case of devices with external operation (position adjustment).

Wall and pipe mounting, transmitter (optional)

Endress+Hauser offers the following mounting bracket for installing the device on pipes or walls:

A0032492

Ordering information:

- Product Configurator, order code for "Accessories enclosed", option "PA"
- For devices with separate housing (can be ordered using the order code for "Additional options 2") included in the scope of delivery
- Can be ordered as a separate accessory (part no.: 71102216).

For further details, see → 103.

Wall and pipe mounting, valve manifold (optional)

A0030607

For the technical data (such as the dimensions or order numbers for screws), see the document SD01553P/00/EN.

Ordering information:

Product Configurator, order code for "Accessories enclosed", option "PK"

Heat insulation – PMC71 high-temperature version

The PMC71 high-temperature version must only be insulated up to a certain height. The maximum permitted insulation height is indicated on the devices and applies to an insulation material with a heat conductivity $\leq 0.04 \text{ W/(m x K)}$ and to the maximum permitted ambient and process temperature (see table below). The data were determined under the most critical application "quiescent air".

The data were determined under the most critical application "quiescent air".

A0021075

- A Ambient temperature range
B Process temperature
1 Insulation height
2 Insulation material

	Temperature
Ambient temperature range	≤ 70 °C (158 °F)
Process temperature	≤ 150 °C (302 °F)

Mounting of PVDF screw-in fittings

⚠ WARNING

Risk of damage to process connection!

Risk of injury!

- PVDF threaded process connections must be mounted with the mounting bracket supplied!

The mounting bracket can be installed on pipes with a diameter of 1 ¼" to 2" or on walls.

Dimensions → 52.

"Separate housing" version

With the "separate housing" version, you are able to mount the housing with the electronics insert at a distance from the measuring point. This version facilitates trouble-free measurement

- Under particularly difficult measuring conditions (at installation locations that are cramped or difficult to access)
- If rapid cleaning of the measuring point is required and
- If the measuring point is exposed to vibrations.

You can choose between different cable versions:

- PE: 2 m (6.6 ft), 5 m (16 ft) and 10 m (33 ft)
- FEP: 5 m (16 ft).

Ordering information: Product Configurator, order code for "Additional options 2", version "G".

Dimensions →  103

In the case of the "separate housing" version, the sensor is delivered with the process connection and cable ready mounted. The housing and a mounting bracket are enclosed as separate units. The cable is provided with a socket at both ends. These sockets are simply connected to the housing and the sensor.

Degree of protection for the process connection and sensor with the use of

- FEP cable:
 - IP 69 ¹⁾
 - IP 66 NEMA 4/6P
 - IP 68 (1.83 mH₂O for 24 h) NEMA 4/6P
- PE cable:
 - IP 66 NEMA 4/6P
 - IP 68 (1.83 mH₂O for 24 h) NEMA 4/6P

Technical data of the PE and FEP cable:

- Minimum bending radius: 120 mm (4.72 in)
- Cable extraction force: max. 450 N (101.16 lbf)
- Resistance to UV light

Use in hazardous area:

- Intrinsically safe installations (Ex ia/IS)
- FM/CSA IS: for Div. 1 installation only

1) Designation of the IP protection class according to DIN EN 60529. Previous designation "IP69K" according to DIN 40050 Part 9 is no longer valid (standard withdrawn on November 1, 2012). The tests required by both standards are identical.

Reduction of the installation height

If the separate housing is used, the installation height of the process connection is reduced compared to the dimensions of the standard version.

Turning the housing

The housing can be rotated up to 360° by loosening the Allen screw.

Your benefits

- Easy mounting due to optimum alignment of housing
- Good, accessible device operation
- Optimum readability of the onsite display (optional).

Diaphragm seal systems ⁴⁾	—	—	—	→ 📄 121
MID parts certificate	—	—	-25 to +55 °C (-13 to +131 °F)	—

- 1) If the temperature is below -40 °C (-40 °F), the chance of failure increases. Product Configurator, order code for "Test, Certificate" option "JN".
- 2) If the temperature is below -40 °C (-40 °F), the chance of failure increases. Product Configurator, order code for "Test, Certificate" option "JT".
- 3) Extended temperature application range (-50 to +85 °C (-58 to +185 °F)) with restrictions in optical properties, such as display speed and contrast
- 4) Ambient temperature range and process temperature range are mutually dependent - see "Heat insulation" section → 121

For high-temperature applications, either a PMP75 with a temperature isolator or with a capillary can be used. If vibrations also occur in the application, Endress+Hauser recommends using a PMP75 with a capillary. If a PMP75 with a temperature isolator or capillary is used, we recommend a suitable bracket for mounting (see "Wall and pipe mounting" section → 42).

PMP71: Ambient temperature T_a depending on the process temperature T_p

The process connection must be fully insulated for ambient temperatures below -40 °C (-40 °F).

A0039403

1 Insulation material

Hazardous area

- For devices for use in hazardous areas, see Safety Instructions, Installation or Control Drawing → 135.
- Pressure measuring devices that have the usual explosion protection certificates (e.g. ATEX-/ CSA-/ FM-/ IEC Ex,...) can be used in hazardous areas at ambient temperatures down to -50°C (-58°F) (order code for "Test, Certificate" option "JN"). The functionality of the explosion protection is also guaranteed for ambient temperatures down to -50°C (-58°F).
- Pressure measuring devices that have the usual explosion protection certificates (e.g. ATEX-/ IEC Ex, etc.) can be used in hazardous areas at ambient temperatures down to -60 to $+85^{\circ}\text{C}$ (-76 to $+185^{\circ}\text{F}$) (order code for "Test, Certificate" option "JT"). The functionality of the explosion protection is also guaranteed for ambient temperatures down to -50°C (-58°F). At temperatures $\leq -50^{\circ}\text{C}$ (-58°F), explosion protection is guaranteed by the housing in the case of flameproof enclosure (Ex d) type of protection. The functionality of the transmitter cannot be fully guaranteed.

Storage temperature range

- -40 to $+90^{\circ}\text{C}$ (-40 to $+194^{\circ}\text{F}$)
Option -50 to $+90^{\circ}\text{C}$ (-58 to $+194^{\circ}\text{F}$) order code 580 "Test, Certificate" option "JN". If the temperature is below -40°C (-40°F), the probability of a failure increases.
- Option -60 to $+90^{\circ}\text{C}$ (-76 to $+194^{\circ}\text{F}$) order code 580 "Test, Certificate" option "JT". If the temperature is below -40°C (-40°F), the probability of a failure increases.
- Local display: -40 to $+85^{\circ}\text{C}$ (-40 to $+185^{\circ}\text{F}$)
- Separate housing: -40 to $+60^{\circ}\text{C}$ (-40 to $+140^{\circ}\text{F}$)
- Devices with PVC-armored capillary: -25 to $+80^{\circ}\text{C}$ (-13 to $+176^{\circ}\text{F}$)

Degree of protection

- Depends on the deployed
- housing: → 53
 - separate housing: → 103

Climate class

Class 4K4H (air temperature: -20 to $+55^{\circ}\text{C}$ (-4 to $+131^{\circ}\text{F}$), relative humidity: 4 to 100 %) fulfilled as per DIN EN 60721-3-4 (condensation possible. With PMC71, avoid condensate in the device.)

Electromagnetic compatibility

- Electromagnetic compatibility as per EN 61326 and NAMUR recommendation EMC (NE21).
- With enhanced immunity against electromagnetic fields as per EN 61000-4-3: 30 V/m with closed cover (for devices with T14 housing)
Increased interference immunity with 30 V/m not available for 1-5V DC. EMC interference immunity for 1-5V DC: 10 V/m
- Maximum deviation: $< 0.5\%$ of span
- All EMC measurements were performed with a turn down (TD) = 2:1.
- Class E3 as per OIML R75-2

For further details refer to the Declaration of Conformity.

Vibration resistance

Device/accessory	Test standard	Vibration resistance
PMC71 ¹⁾	GL	Guaranteed for 3 to 25 Hz: $\pm 1.6\text{ mm}$ (0.063 in); 25 to 100 Hz: 4 g in all 3 axes
PMP71		
PMP75 ^{2) 3)}		
With mounting bracket	IEC 62828-1 / IEC 61298-3	Guaranteed for 10 to 60 Hz: $\pm 0.15\text{ mm}$ (0.0059 in); 60 to 500 Hz: 2 g in all 3 axes
PMP71 with MID parts certificate	OIML R117-1	Class M3

1) Not for high-temperature version with Ex d[ia], CSA XP or FM XP

2) With aluminum T14 housing only

3) For applications with very high temperatures, a PMP75 with either a temperature isolator or a capillary can be used. If vibrations also occur in the application, Endress+Hauser recommends using a PMP75 with a capillary. If a PMP75 with a temperature isolator or capillary is used, it must be mounted with a mounting bracket

Oxygen applications

Oxygen and other gases can react explosively to oils, grease and plastics, such that, among other things, the following precautions must be taken:

- All components of the system, such as measuring devices, must be cleaned in accordance with the BAM requirements.
- Depending on the materials used, a certain maximum temperature and a maximum pressure must not be exceeded for oxygen applications.

The devices that are suitable for gaseous oxygen applications are indicated by $p_{\max}$ in the following table.

HB = Cleaned for oxygen service

Order code for devices ¹⁾ , cleaned for oxygen applications	$p_{\max}$ for oxygen applications	$T_{\max}$ for oxygen applications
PMC71 – * * * * * 2 * * or PMC71 – * * * * * A * * HB, Devices with sensors, nominal value < 10 bar (150 psi)	Overpressure limit (OPL) ^{2) 3)} of the sensor	60 °C (140 °F)
PMC71 – * * * * * 2 * *, PMC71 – * * * * * A * * HB, Devices with sensors, nominal value ≥ 10 bar (150 psi)	40 bar (600 psi)	60 °C (140 °F)
PMP71 – * * * * * N * * or PMP71 – * * * * * F * * HB	Depends on the lowest-rated element, with regard to pressure, of the selected components: overpressure limit (OPL) of the sensor, process connection (1.5 x PN) or fill fluid (80 bar (1 200 psi))	60 °C (140 °F)
PMP75 – * * * * * N * * or PMP75 – * * * * * F * * HB	Depends on the lowest-rated element, with regard to pressure, of the selected components: overpressure limit (OPL) of the sensor, process connection (1.5 x PN) or fill fluid (80 bar (1 200 psi))	60 °C (140 °F)

1) Devices only, not accessories or enclosed accessories.

2) Product Configurator, order code for "Sensor range; sensor overpressure limit (= OPL)"

3) PMC71 with PVDF thread or PVDF flange: only mount with the enclosed mounting bracket. MWP 10 bar (150 psi), OPL max. 15 bar (225 psi). Process temperature range -10 to +60 °C (+14 to +140 °F)

PWIS-free applications

Special cleaning of the transmitter to remove paint-wetting substances, for use in paint shops, for instance.

Ordering information:

Product Configurator, order code for "Seal", option "L" or "M".

Ultrapure gas applications

Endress+Hauser also offers device for special applications, such as for ultrapure gas, which have been cleaned of oil and grease. No special restrictions regarding the process conditions apply to these devices.

Ordering information:

- Product Configurator, order code for "Seal" or
- Product Configurator, order code for "Fill fluid".

Hydrogen applications

A **ceramic** process isolating diaphragm or a **gold-coated** metal process isolating diaphragm offers universal protection against hydrogen diffusion, both in gas applications and in applications with aqueous solutions.

Applications with hydrogen in aqueous solutions

A **gold/rhodium-coated** metal process isolating diaphragm (AU/Rh) offers effective protection against hydrogen diffusion.

Operation in very corrosive environment

PMP75:

For corrosive environments (e.g. maritime environment / coastal areas), Endress+Hauser recommends the use of a PVC or PTFE armor for the capillaries (→ 108).

Process

Process temperature limits For oxygen applications →  48

PMC71 (with ceramic process membrane)

- -25 to +125 °C (-13 to +257 °F)
- High-temperature version: -25 to +150 °C (-13 to +302 °F); Product Configurator, order code for "Additional options 1", option "T".
- For saturated steam applications, use a device with a metal process membrane, or provide a siphon for temperature isolation when installing.
- Observe the process temperature range of the seal in the following table.

Seal	Notes	Process temperature range	Option ¹⁾
FKM Viton	—	-25 to +125 °C (-13 to +257 °F)/ 150 °C (302 °F) ²⁾	A, L
EPDM 70	FDA 21CFR177.2600	-40 to +125 °C (-40 to +257 °F)/ 150 °C (302 °F) ²⁾	B
EPDM 331	FDA 21CFR177.2600; 3A Class II; USP Class VI DVGW (UBA "KTW", W270), NSF61	-20 to +125 °C (-4 to +257 °F)/ 150 °C (302 °F) ²⁾	B ³⁾
FFKM Perlast G75LT	—	-20 to +125 °C (-4 to +257 °F)/ 150 °C (302 °F) ²⁾	C
Kalrez, Compound 4079	—	+5 to +125 °C (+41 to +257 °F)/ 150 °C (302 °F) ²⁾	D, M
Chemraz, Compound 505	—	-10 to +125 °C (+14 to +257 °F)/ 150 °C (302 °F) ²⁾	E
HNBR	FDA 21CFR177.2600; 3A Class II; KTW; AFNOR; BAM	-25 to +125 °C (-13 to +257 °F)	F ⁴⁾
NBR	—	-10 to +100 °C (+14 to +212 °F)	F
FKM Viton	FDA 21CFR177.2600	-5 to +125 °C (+23 to +257 °F)	G
FKM Viton	cleaned of oil and grease	-10 to +125 °C (+14 to +257 °F)/ 150 °C (302 °F) ²⁾	1
FKM Viton	cleaned for oxygen service	-10 to +60 °C (+14 to +140 °F)	2 or A ⁵⁾
The process temperature ranges specified here refer to permanent application of the PMC71. They may be exceeded for a short time (e.g. for cleaning).			

- 1) Product Configurator, order code for "Seal"
- 2) 150 °C (302 °F) for high-temperature version
- 3) In combination with order code for "Additional options 1" option "F" or with order code for "Process connection" option "MP", "MR", "TD", "TF", "TK" or "TR"
- 4) These seals are used for devices with 3A-approved process connections.
- 5) with option "HB", see Product Configurator, order code for "Service"

Applications with changes in temperature

Extreme changes in temperature can result in temporary measuring errors. Temperature compensation takes place after a few minutes. Internal temperature compensation is faster the smaller the change in temperature and the longer the time interval.

For further information please contact your local Endress+Hauser Sales Center.

PMP71 (with metal process membrane)

Designation	Limits
Process connections with internal process membrane	-40 to +125 °C (-40 to +257 °F) (150 °C (302 °F) for max. one hour)
Process connections with flush membrane ¹⁾	-40 to +100 °C (-40 to +212 °F)
Process connections with flush membrane, G ½ A, M20x1.5	-20 to +85 °C (-4 to +185 °F)

1) Process connection 1A, 1B, 1N, 1P: seal supplied up to -20 °C (-4 °F) process temperature

PMP71 (with metal process membrane) with MID parts certificate

-25 to +55 °C (-13 to +131 °F)

PMP75 (with diaphragm seal)

- Depending on the design and on the diaphragm seal and fill fluid: -70 °C (-94 °F) up to +400 °C (+752 °F). Observe temperature application limits of diaphragm seal oil → 120.
- Please observe the maximum gauge pressure and maximum temperature.

Devices with PTFE-coated process membrane

The non-stick coating has excellent gliding properties and is used to protect the process membrane against abrasive media.

NOTICE

The device can be damaged if the PTFE foil is used for anything other than the designated purpose!

- ▶ The PTFE foil used is designed to protect the unit against abrasion. It does not provide protection against corrosive media.

Application of 0.25 mm (0.01 in) PTFE foil on AISI 316L (1.4404/1.4435) process membrane - see the following graphic:

A0026949-EN

For vacuum applications: $p_{abs} \leq 1 \text{ bar (14.5 psi) to } 0.05 \text{ bar (0.725 psi) up to max. } +150 \text{ °C (302 °F)}$.

Process temperature limits of capillary armoring: PMP75

- 316L: No restrictions
- PTFE: No restrictions
- PVC: See the following diagram

A0028220

Pressure specifications

⚠ WARNING

The maximum pressure for the measuring device depends on the lowest-rated element with regard to pressure.

- ▶ For pressure specifications, see the "Measuring range" section and the "Mechanical construction" section.
- ▶ The measuring device must be operated only within the specified limits!
- ▶ MWP (maximum working pressure): The MWP (maximum working pressure) is specified on the nameplate. This value refers to a reference temperature of +20 °C (+68 °F) and may be applied to the device for an unlimited time. Observe the temperature dependency of the MWP. For the pressure values permitted at higher temperatures for flanges, please refer to standards EN 1092-1 (with regard to their stability-temperature property, the materials 1.4435 and 1.4404 are grouped together under EN 1092-1; the chemical composition of the two materials can be identical.), ASME B 16.5a, JIS B 2220 (the latest version of the standard applies in each case).
- ▶ The test pressure corresponds to the over pressure limit of the individual sensors (OPL = 1.5 x MWP (formula does not apply to the PMP71 or PMP75 with a 40 bar (600 psi) or 100 bar (1500 psi) measuring cell)) and may be applied only for a limited period of time to prevent any lasting damage.
- ▶ The Pressure Equipment Directive (2014/68/EU) uses the abbreviation "PS". The abbreviation "PS" corresponds to the MWP (maximum working pressure) of the measuring device.
- ▶ In the case of sensor range and process connections where the over pressure limit (OPL) of the process connection is smaller than the nominal value of the sensor, the device is set at the factory, at the very maximum, to the OPL value of the process connection. If you want to use the entire sensor range, select a process connection with a higher OPL value (1.5 x PN; MWP = PN)
- ▶ In oxygen applications, the values for $p_{\max}$ and $T_{\max}$ for oxygen applications must not be exceeded → 48.
- ▶ Devices with ceramic process isolating diaphragm: Avoid steam hammering! Steam hammering can cause zero point drifts. Recommendation: Residue (water droplets or condensation) may remain on the process isolating diaphragm following SIP cleaning and can result in local steam hammering the next time steam cleaning takes place. In practice, drying the process isolating diaphragm (e.g. by blowing off excess moisture) has proven to be a successful way of avoiding steam hammering.

Burst pressure

Device	Measuring range	Burst pressure
PMP71 ¹⁾	400 mbar (6 psi)...10 bar (150 psi)	100 bar (1 450 psi)
	40 bar (600 psi)	250 bar (3 625 psi)
	100 bar (1 500 psi)	1 000 bar (14 500 psi)
	400 bar (6 000 psi)	2 000 bar (29 000 psi)
	700 bar (10 500 psi)	2 800 bar (40 600 psi)

1) Excluding PMP75 with mounted diaphragm seal system, PMC71 with ceramic membrane, and the universal adapter process connection.

Mechanical construction

 For the dimensions, see the Product Configurator: www.endress.com

Search for product → click "Configuration" to the right of the product image → after configuration click "CAD"

The following dimensions are rounded values. For this reason, the dimensions may deviate from the values on www.endress.com.

Device height

The device height is calculated from

- the height of the housing
- the height of optional mounted parts such as temperature isolators or capillaries
- the height of the relevant process connection.

The individual heights of the components can be found in the following sections. To calculate the device height, simply add up the individual heights of the components. If necessary, the installation space (the space used to install the device) must also be taken into account. You can use the following table for this:

Section	Page	Elevation	Example
Height of housing	→  53 ff.	(A)	
Optional mounted parts	→  77	(B)	
Process connections	→  56	(H)	
Installation space	-	(I)

PMC71 hygiene

Hygienic process connections with flush membrane

Many process connections with an EPDM or HNBR seal are approved for the PMC71 in accordance with the guidelines of the 3A Sanitary Standard. To ensure the 3A approval for the PMC71 version is valid, a 3A-approved process connection must be selected in combination with an EPDM or HNBR seal when ordering (Product Configurator, order code for "Seal", option B or F).

Valve manifold DA63M-
(optional)

Endress+Hauser supplies milled valve manifolds via the transmitter's product structure in the following versions:

- 2-way valve manifolds in 316L or AlloyC can be
- ordered as an **enclosed** accessory (seal for mounting is enclosed)
 - ordered as a **mounted** accessory (mounted valve manifolds are supplied with a documented leakage test).

Certificates ordered with the equipment (e.g. 3.1 material certificate and NACE) and tests (e.g. PMI and pressure test) apply to the transmitter and the valve manifold.

For other details (order option, dimension, weight, materials), see SD01553P/00/EN "Mechanical accessories for pressure measuring devices".

During the operating life of the valves, it may be necessary to re-tighten the packing.

Mounting on valve manifold

Flushing rings

A0028007

Use flushing rings if there is a risk of medium buildup or clogging at the process connection. The flushing ring is fitted between the process connection and the process connection provided by the customer.

Using the two lateral flushing holes, medium buildup or clogging in front of the process isolating diaphragm can be rinsed away and the pressure chamber vented.

Various nominal widths and forms allow adaption to the respective process flange.

For other details (dimension, weight, materials), see SD01553P/00/EN "Mechanical accessories for pressure measuring devices".

Order options

Flushing rings can be ordered as a separate accessory or as an order option for the device.

Materials in contact with process

NOTICE

- Device components in contact with the process are listed in the "Mechanical construction" → 52 and "Ordering information" → 131 sections.

Delta-ferrite content

A delta-ferrite content of $\leq 3\%$ can be guaranteed and certified for the wetted parts if option "8" is selected in the "Additional options 1" or "Additional options 2" order code in the Product Configurator.

If the PMC71 with hygienic process connections is selected, a delta-ferrite content of $\leq 1\%$ can be guaranteed and certified if option "8" is selected in the "Additional options 1" or "Additional options 2" order code in the Product Configurator.

TSE Certificate of Suitability (Transmissible Spongiform Encephalopathy)

The following applies to all device components in contact with the process:

- They do not contain any materials derived from animals.
- No additives or operating materials derived from animals are used in production or processing.

Process connections

- "Clamp connections" and "Hygienic process connections": AISI 316L (DIN/EN material number 1.4435)
- Endress+Hauser supplies threaded process connections and DIN/EN flanges in stainless steel according to AISI 316L (DIN/EN material number 1.4404 or 1.4435). With regard to their stability-temperature property, the materials 1.4404 and 1.4435 are grouped together under 13EO in EN 1092-1: 2001 Tab. 18. The chemical composition of the two materials can be identical.
- Some process connections are also available in Alloy C276 (DIN/EN material number 2.4819). For this purpose see the information in the "Mechanical construction" section.

Operability

Operating concept

Operator-oriented menu structure for user-specific tasks

- Commissioning
- Operation
- Diagnosis

Quick and safe commissioning

Guided menus for applications

Reliable operation

- Local operation possible in several languages
- Standardized operation at the device and in the operating tools
- Parameters relating to measured values can be locked/unlocked using the device's write protection switch, using the device software or via remote operation

Efficient diagnostics increase measurement availability

- Remedial measures are integrated in plain text
- Diverse simulation options

Local operation

Functions

Function	External operation (operating keys, optional, not T17 housing)	Internal operation (electronic insert)	Onsite display (optional)
Position adjustment (zero point correction)	✓	✓	✓
Setting lower range value and upper range value - reference pressure present at the device	✓ (HART only)	✓ (HART only)	✓
Device reset	✓	✓	✓
Locking and unlocking parameters relevant to the measured value	—	✓	✓
Value acceptance indicated by the green LED	✓	✓	✓
Switching damping on and off	✓ (only if display is connected)	✓ (HART and PA only)	✓
Configuring the bus address of the device (PA)	—	✓	✓
Switching simulation mode on and off (FOUNDATION Fieldbus)	—	✓	✓

Operating the device using onsite display (optional)

A 4-line liquid crystal display (LCD) is used for display and operation. The onsite display shows measured values, dialog text as well as fault and notice messages in plain text, thereby supporting the user in every stage of operation.

The display can be removed for easy operation.

The device display can be turned in 90° steps.

Depending on the installation position of the device, this makes it easy to operate the device and read the measured value.

Functions:

- 8-digit measured value display including sign and decimal point and bar graph for
 - 4 to 20 mA HART (bar graph from 4 to 20 mA)
 - 1-5V DC (bar graph from 1 to 5 volt)
 - PROFIBUS PA (bar graph as graphic display of standardized value of AI block)
 - FOUNDATION Fieldbus (bar graph as graphic display of transducer output).
- Simple and complete menu guidance due to breakdown of parameters into several levels and groups.
- Menu guidance in up to 8 languages
- Each parameter is given a 3-digit ID number for easy navigation.
- Option for configuring the display according to individual requirements and preferences, such as language, alternating display, display of other measured values such as sensor temperature, contrast setting.
- Comprehensive diagnostic functions (fault and warning message, peak-hold indicators, etc.).
- Rapid and safe commissioning with the Quick Setup menus

Overview

A0016498

- 1 Operating keys
- 2 Bargraph
- 3 Symbol
- 4 Header
- 5 Parameter ID number

Operating keys on the exterior of the device

With the aluminum housing (T14), the operating keys are located either outside on the housing, under the protection cap or inside on the electronic insert. With the stainless steel housing (T17), the operating keys are always located inside the housing on the electronic insert.

A0020030

- A 1-5V DC and 4 to 20 mA HART
- B PROFIBUS PA and FOUNDATION Fieldbus

The operating keys located externally on the device work on the Hall sensor principle. As a result, no additional openings are required in the device. This guarantees:

- Complete protection against environmental influences such as moisture and contamination.
- Simple operation without any tools.
- No wear.

1) Not for 1-5V DC

FieldCare

FieldCare is an Endress+Hauser asset management tool based on FDT technology. With FieldCare, you can configure all Endress+Hauser devices as well as devices from other manufacturers that support the FDT standard.

FieldCare supports the following functions:

- Configuration of transmitters in offline and online mode
- Device data upload/download (not for 1-5V DC)
- HistoROM®/M-DAT analysis
- Documentation of the measuring point

Connection options:

- HART via Commubox FXA195 and USB interface of a computer
- PROFIBUS PA via segment coupler and PROFIBUS interface card
- Service interface with Commubox FXA291 and ToF adapter FXA291 (USB).

 For further information, please contact your local Endress+Hauser Sales Center.

Field Xpert SFX100

Field Xpert is an industrial PDA with integrated 3.5" touchscreen from Endress+Hauser based on Windows Mobile. It offers wireless communication via the optional VIATOR Bluetooth modem from Endress+Hauser. Field Xpert also works as a stand-alone device for asset management applications. For details, refer to BA00060S/04/EN.

Commubox FXA195

For intrinsically safe HART communication with FieldCare via the USB interface. For details refer to TI00404F/00/EN.

Commubox FXA291

The Commubox FXA291 connects Endress+Hauser field devices with a CDI interface (=Endress+Hauser Common Data Interface) to the USB interface of a personal computer or a notebook. For details refer to TI00405C/07/EN.

 For the following Endress+Hauser devices you need the "ToF adapter FXA291" as an additional accessory:

- Cerabar S PMC71, PMP7x
- Deltabar S PMD7x, FMD7x
- Deltapilot S FMB70

ToF Adapter FXA291

The ToF adapter FXA291 connects the Commubox FXA291 with devices of the ToF platform, pressure equipment and Gammapiot via the USB interface of a personal computer or a notebook. For details refer to KA00271F.

Profiboard

For connecting a PC to the PROFIBUS.

Proficard

For connecting a laptop to the PROFIBUS.

FF configuration program

FF configuration program, such as NI-FBUS Configurator, to

- connect devices with "FOUNDATION Fieldbus signal" into an FF-network
- set FF-specific parameters

Operation with NI-FBUS Configurator:

The NI-FBUS Configurator is an easy-to-use graphical environment for creating linkages, loops, and a schedule based on the fieldbus concepts.

You can use the NI-FBUS Configurator to configure a fieldbus network as follows:

- Set block and device tags
- Set device addresses
- Create and edit function block control strategies (function block applications)
- Configure vendor-defined function and transducer blocks
- Create and edit schedules
- Read and write to function block control strategies (function block applications)
- Invoke methods specified in the manufacturer-specific DD (e.g. basic device settings)
- Display DD menus (e.g. tab for calibration data)
- Download a configuration
- Verify a configuration and compare it to a saved configuration
- Monitor a downloaded configuration
- Replace devices
- Save and print a configuration

**HistoROM®/M-DAT
(optional)**

The HistoROM®/M-DAT is a memory module that can be attached to any electronic insert (not for 1-5V DC). HistoROM®/M-DAT can be retrofitted at any stage (order number: 52027785).

Your benefits

- Quick and safe commissioning of the same measuring points by copying the configuration data of one transmitter to another transmitter.
- Reliable process monitoring thanks to cyclical recording of pressure and sensor temperature measured values
- Simple diagnosis by recording diverse events such as alarms, configuration changes, counters for measuring range undershoot and overshoot for pressure and temperature as well as user limit overshoot and undershoot for pressure and temperature etc.
- Analysis and graphic evaluation of the events and process parameters via software (contained in scope of supply).

You can copy data from one transmitter to another transmitter when operating a FOUNDATION Fieldbus device via an FF configuration program. You need the Endress+Hauser FieldCare operating program, the Commubox FXA291 service interface and the ToF adapter FXA291 to be able to access the data and events saved in the HistoROM®/M-DAT.

Planning instructions for diaphragm seal systems

NOTICE

Diaphragm seal systems sized/ordered incorrectly

The performance and the permitted range of application of a diaphragm seal system depend on the process membrane used, the fill fluid, the coupling, the design and on the process and ambient conditions present in the individual application.

- To help you select the right diaphragm seal systems for your particular applications, Endress+Hauser provides its customers with the "Applicator Sizing Diaphragm Seal" selection tool, which is available free of charge at "www.endress.com/applicator" or as a download.

A0034616

For further details, or for information on an optimum diaphragm seal solution, your local Endress+Hauser Sales Center is also always happy to help.

Applications

Diaphragm seal systems should be used if the process and the device need to be separated.

Diaphragm seal systems offer clear advantages in the following instances:

- In the case of extreme process temperatures
- For aggressive media
- In the case of process media that crystallize
- In the case of corrosive or highly various process media or process media with solids content
- In the case of heterogeneous and fibrous process media
- If extreme measuring point cleaning is necessary, or in the event of very damp mounting locations
- If the measuring point is exposed to severe vibrations
- For mounting locations that are difficult to access

Design and mode of operation

Diaphragm seals act as separators between the measuring system and the process.

A diaphragm seal system consists of:

- A diaphragm seal
- A capillary tube or temperature isolator where applicable
- Fill fluid
- A pressure transmitter.

The process pressure acts via the process membrane of a diaphragm seal on the liquid-filled system, which transfers the process pressure to the sensor of the pressure transmitter.

Endress+Hauser delivers all diaphragm seal systems as welded versions. The system is hermetically sealed, which ensures greater reliability.

The diaphragm seal determines the application range of the system on the basis of

- The diameter of the process membrane
- The stiffness and material of the process membrane
- The design (oil volume)

Diameter of the process membrane

The greater the diameter of the process membrane (less stiff), the smaller the temperature effect on the measurement result.

Stiffness of the process membrane

The stiffness depends on the diameter of the process membrane, the material, any existing coating, and the thickness and shape of the process membrane. The thickness of the process membrane and the shape are determined by the design. The stiffness of a process membrane of a diaphragm seal influences the temperature application range and the measured error caused by temperature effects.

The Endress+Hauser TempC Membrane: Highest accuracy and process safety when measuring pressure and differential pressure using diaphragm seals

To measure with even greater accuracy in these applications and to increase process safety, Endress+Hauser has developed the TempC Membrane which is based on a completely revolutionary technology. This membrane guarantees the utmost level of accuracy and process safety in diaphragm seal applications.

- The very low temperature effect minimizes the effect of process and ambient temperature fluctuations, thereby guaranteeing accurate and reliable measurements. Measurement inaccuracies caused by temperature are reduced to a minimum.
- The TempC Membrane can be used at temperatures between -70°C (-94°F) and $+400^{\circ}\text{C}$ ($+752^{\circ}\text{F}$). This guarantees maximum process safety even for very long sterilization and cleaning cycles (SIP/CIP) in tanks and pipes at high temperatures.
- Smaller instrumentation dimensions are possible thanks to the TempC Membrane. With a smaller process connection, the new membrane measures at least as accurately as a conventional membrane with a larger diameter.
- Due to the geometry of the membrane, an overshoot occurs initially immediately following a temperature shock. This results in a transient response, the duration and deviation of which are significantly less compared to traditional membrane types. In the case of batch processes, these shorter recovery times mean a far higher level of availability of the production facilities. In the case of TempC Membranes, the effect of the overshoot on the output signal can be reduced by adjusting the damping.

Ordering information:

See the Product Configurator for the individual process connection and the choice of process membrane.

Selection in the Applicator:

Under "Transmitter data" in the "Membrane material" field.

Capillary

As standard, capillaries with an internal diameter of 1 mm (0.04 in) are used.

The capillary tube influences the thermal change, the ambient temperature operating range and the response time of a diaphragm seal system as a result of its length and internal diameter.

Fill fluid

The medium and ambient temperatures as well as the process pressure are very important factors to be considered when selecting the fill fluid. Pay attention to the temperatures and pressures during commissioning and cleaning. Another selection criterion is the compatibility of the fill fluid with the requirements of the medium. For example, only fill fluids that do not present a health hazard may be used in the food industry, e.g. vegetable oil or silicone oil (see also the following section "Diaphragm seal fill fluids").

The fill fluid used influences the thermal change, the temperature application range of a diaphragm seal system and the response time. A temperature change causes a volume change in the fill fluid. The volume change is dependent on the expansion coefficient and on the volume of the fill fluid at calibration temperature (constant in range: +21 to +33 °C (+70 to +91 °F)). The application range can be extended by a fill fluid with a lower expansion coefficient and a shorter capillary.

For example, the fill fluid expands in the event of a temperature increase. The additional volume presses against the process membrane of a diaphragm seal. The stiffer a process membrane is, the greater its return force, which counteracts a volume change and acts together with the process pressure on the measuring cell, thus shifting the zero point.

Pressure transmitter

The pressure transmitter influences the temperature operating range, the TC zero point and the response time as a result of its volume change. The volume change is the volume that has to be shifted to pass through the complete measuring range.

Pressure transmitters from Endress+Hauser are optimized with regard to minimum volume change.

Diaphragm seal filling oils

Medium	P _{abs} = 0.05 bar (0.725 psi) ¹⁾	P _{abs} = ≥1 bar (14.5 psi) ²⁾
Silicone oil	-40 to +180 °C (-40 to +356 °F)	-40 to +250 °C (-40 to +482 °F)
High-temperature oil	-20 to +200 °C (-4 to +392 °F)	-20 to +400 °C (-4 to +752 °F) ^{3) 4) 5)}
Low-temperature oil	-70 to +120 °C (-94 to +248 °F)	-70 to +180 °C (-94 to +356 °F)
Vegetable oil	-10 to +160 °C (+14 to +320 °F)	-10 to +220 °C (+14 to +428 °F)
Inert oil	-40 to +100 °C (-40 to +212 °F)	-40 to +175 °C (-40 to +347 °F) ^{6) 7)}

- 1) Permitted temperature range at p_{abs} = 0.05 bar (0.725 psi) (observe temperature limits of the device and the system!)
- 2) Permitted temperature range at p_{abs} ≥1 bar (14.5 psi) (observe temperature limits of the device and the system!)
- 3) 325 °C (617 °F) at ≥1 bar (14.5 psi) absolute pressure.
- 4) 350 °C (662 °F) at ≥1 bar (14.5 psi) absolute pressure (max. 200 hours).
- 5) 400 °C (752 °F) at ≥1 bar (14.5 psi) absolute pressure (max. 10 hours).
- 6) 150 °C (302 °F) at ≥1 bar (14.5 psi) absolute pressure.
- 7) 175 °C (347 °F) at ≥1 bar (14.5 psi) absolute pressure (max. 200 hours).

The calculation of the operating temperature range of a diaphragm seal system depends on the fill fluid, capillary length and capillary internal diameter, process temperature and oil volume of the diaphragm seal. Detailed calculations, e.g. for temperature ranges, vacuum pressure ranges and temperature ranges, are done separately in the Applicator ["Sizing Diaphragm Seal"](#).

Cleaning instructions

Endress+Hauser offers flushing rings as accessories to clean process isolating diaphragms without taking the transmitters out of the process.

 For further information please contact your local Endress+Hauser Sales Center.

We recommend you perform CIP (cleaning in place (hot water)) before SIP (sterilization in place (steam)) for pipe diaphragm seals. The frequent use of sterilization in place (SIP) will increase the stress on the process isolating diaphragm. Under unfavorable circumstances, frequent temperature changes can lead - on the long term - to material fatigue of the process isolating diaphragm and possibly to a leakage.

Installation instructions

Diaphragm seal systems

- A diaphragm seal together with the transmitter form a closed, calibrated system, which has been filled through openings in the diaphragm seal and in the transmitter's measurement system. These openings are sealed and must not be opened.
- For devices with a temperature isolator or capillary, a suitable fastening device (mounting bracket) is recommended.
- When mounting, sufficient strain relief must be provided for the capillary line to prevent the capillary from bending (capillary bending radius ≥ 100 mm (3.94 in))
- For more detailed installation instructions, Endress+Hauser provides its customers with the free "Applicator Sizing Diaphragm Seal" selection tool, which is available online at ["www.endress.com/applicator"](http://www.endress.com/applicator) or as a download.

Capillary

In order to obtain more precise measurement results and to avoid a defect in the device, mount the capillaries as follows:

- Vibration-free (in order to avoid additional pressure fluctuations)
- Not in the vicinity of heating or cooling lines
- Insulate the capillaries if the ambient temperature is below or above the reference temperature
- With a bending radius ≥ 100 mm (3.94 in)
- When using diaphragm seal systems with a capillary, sufficient strain relief must be provided to prevent the capillary from bending (capillary bending radius ≥ 100 mm (3.94 in)).
- In the case of devices with diaphragm seals and capillaries, the zero point shift caused by the hydrostatic pressure of the filling liquid column in the capillaries must be taken into account when selecting the measuring cell. If a measuring cell with a small measuring range is selected, a position adjustment can cause range violation.

Thermal insulation

Thermal insulation with diaphragm seal directly mounted

The PMP75 must only be insulated up to a certain height. The maximum permitted insulation height is indicated on the devices and applies to an insulation material with a heat conductivity ≤ 0.04 W/(m x K) and to the maximum permitted ambient and process temperature. The data were determined under the most critical application "quiescent air". Maximum permitted insulation height, here indicated on a PMP75 with a flange:

- A Ambient temperature
 B Process temperature
 1 Maximum permitted insulation height
 2 Insulation material

Installation with direct mounting

A0043893

T_a Ambient temperature at transmitter
 T_p Maximum process temperature

T_a	T_p
+85 °C (+185 °F)	-70 to +120 °C (-94 to +248 °F)
+60 °C (+140 °F)	-70 to +160 °C (-94 to +320 °F)
-20 °C (-4 °F)	-70 to +160 °C (-94 to +320 °F)
-50 °C (-58 °F)	0 to +160 °C (+32 to +320 °F)

Mounting with temperature isolator

Use of temperature isolators in the event of constant extreme medium temperatures which cause the maximum permissible electronics temperature of +85 °C (+185 °F) to be exceeded. Diaphragm seal systems with temperature isolators can be used up to a maximum temperature of +400 °C (+752 °F) depending on the fill fluid used. . To minimize the influence of rising heat, mount the device horizontally or with the housing pointing downwards. The additional installation height causes a zero point shift of maximum 21 mbar (0.315 psi) due to the hydrostatic column in the temperature isolator. This zero point shift can be corrected on the device.

The maximum ambient temperature T_a at the transmitter depends on the maximum process temperature T_p .

The maximum process temperature depends on the diaphragm seal fill fluid used.

A0039378

- A No insulation
- B Insulation 30 mm (1.18 in)

2) Maximum process temperature

3) Process temperature: max. +400 °C (+752 °F), depending on the diaphragm seal fill fluid used

Vacuum applications

Mounting instructions

For vacuum applications, pressure transmitters with a ceramic measuring membrane (oil-free) are preferable.

For applications under vacuum, Endress+Hauser recommends mounting the pressure transmitter below the diaphragm seal. This prevents vacuum loading of the diaphragm seal caused by the presence of fill fluid in the capillary.

When the pressure transmitter is mounted above the diaphragm seal, the maximum height difference H1 in accordance with the diagrams below must not be exceeded. The following graphic describes installation above the lower diaphragm seal:

A0020472

The maximum height difference depends on the density of the fill fluid and the smallest ever pressure that is permitted to occur at the diaphragm seal (empty vessel), see the diagram below. The following diagram depicts the maximum installation height above the diaphragm seal for vacuum applications.

A0023986-EN

- A Height difference H1

Certificates and approvals

CE mark	The device meets the legal requirements of the relevant EC directives. Endress+Hauser confirms that the device has been successfully tested by applying the CE mark.
RoHS	The measuring system complies with European Directive 2002/96/EC.
RCM-Tick marking	The supplied product or measuring system meets the ACMA (Australian Communications and Media Authority) requirements for network integrity, interoperability, performance characteristics as well as health and safety regulations. Here, especially the regulatory arrangements for electromagnetic compatibility are met. The products bear the RCM-Tick marking on the nameplate.  A0029561
Ex approvals	■ ATEX ■ FM ■ CSA ■ NEPSI ■ IECEX ■ TIIS ■ Also combinations of different approvals All explosion protection data are given in separate documentation which is available upon request. The Ex documentation is supplied as standard with all Ex-systems →  135.
EAC conformity	The measuring system meets the legal requirements of the applicable EAC guidelines. These are listed in the corresponding EAC Declaration of Conformity along with the standards applied. Endress+Hauser confirms successful testing of the device by affixing to it the EAC mark.
Suitable for hygiene applications	For information on installation and approvals, see documentation SD02503F "Hygiene approvals". For information on 3-A and EHEDG-tested adapters, see documentation TI00426F "Weld-in adapter, process adapter and flanges".
Certificate of current Good Manufacturing Practices (cGMP)	Product Configurator, order code for "Test, Certificate" option "JG" ■ The certificate is only available in English ■ Materials of construction of product wetted parts ■ TSE compliance ■ Polishing and surface finish ■ Material/ compound compliance table (USP Class VI, FDA conformity)
Functional safety SIL/ IEC 61508 Declaration of Conformity (optional)	The Cerabar S with 4 to 20 mA output signal has been developed in accordance with the IEC 61508 standard. These devices can be used to monitor the process level and pressure up to SIL 3. For a detailed description of safety functions with the Cerabar S, settings and functional safety data, see the "Functional safety manual - Cerabar S" SD00190P/00. For devices up to SIL 3 / IEC 61508 Declarations of Conformity see: Ordering information: Product Configurator, order code for "Additional options 1" and "Additional options 2", version "E".
Overfill prevention	WHG (see document ZE00260P/00/EN) Ordering information: Product Configurator, order code for "Approval", option "6".

CRN approval	A CRN approval is available for some device versions. A CRN-approved process connection with a CSA approval must be ordered for a CRN-approved device. These devices are fitted with a separate plate bearing the registration number CRN 0F10525.5C. PMP75 devices with a capillary are not CRN-approved. Ordering information: Product Configurator, order code for "Process connection; material" and Product Configurator, order code for "Approval" (only in conjunction with an approved process connection)
Other standards and guidelines	The applicable European guidelines and standards can be found in the relevant EU Declarations of Conformity. The following standards were also applied: IEC 62828-1 / DIN EN 60770 and IEC 62828-2 / DIN EN 60770: Transmitters for use in industrial-process control systems. Part 1: Methods for inspection and routine testing DIN 16086: Electrical pressure measuring instruments, pressure sensors, pressure transmitters, pressure measuring instruments, concepts, specifications on data sheets EN 61326-X: EMC product family standard for electrical equipment for measurement, control and laboratory use. EN 60529: Degrees of protection provided by enclosures (IP code) WELMEC guide 8.8: General and Administrative Aspects of the Voluntary System of Modular Evaluation of Measuring instruments under the MID. OIML R117-1 Edition 2007 (E): Dynamic measuring systems for liquids other than water. EN 12405-1/A1 Edition 2006: Gas meters – Conversion devices – Part 1: Volume conversion
Pressure Equipment Directive 2014/68/EU (PED)	Pressure equipment with permitted pressure ≤ 200 bar (2 900 psi) Pressure equipment (maximum allowable pressure $PS \leq 200$ bar (2 900 psi)) can be classified as pressure accessories in accordance with Pressure Equipment Directive 2014/68/EU. If the maximum allowable pressure is ≤ 200 bar (2 900 psi) and the pressurized volume of the pressure equipment is ≤ 0.1 l, the pressure equipment is subject to the Pressure Equipment Directive (see Pressure Equipment Directive 2014/68/EU, Article 4, point 3). The Pressure Equipment Directive only requires that the pressure equipment shall be designed and manufactured in accordance with the "sound engineering practice of a Member State". <i>Reasons:</i> ■ Pressure Equipment Directive (PED) 2014/68/EU Article 4, point 3 ■ Pressure equipment directive 2014/68/EU, Commission's Working Group "Pressure", Guideline A-05 + A-06 <i>Note:</i> A partial examination shall be performed for pressure instruments that are part of safety equipment for the protection of a pipe or vessel from exceeding allowable limits (safety accessory in accordance with Pressure Equipment Directive 2014/68/EU Article 2, point 4).

Pressure equipment with allowable pressure > 200 bar (2 900 psi)

Pressure equipment designated for application in every process fluid having a pressurized volume of <0.1 l and a max. allowable pressure PS > 200 bar (2 900 psi) must satisfy the essential safety requirements set out in Annex I of the Pressure Equipment Directive 2014/68/EU. According to Article 13 pressure equipment shall be classified by category in accordance with Annex II. Taking into account the low volume specified above, the pressure instruments can be categorized as category I pressure equipment. They must then bear a CE mark.

Reasons:

- Pressure Equipment Directive 2014/68/EU, Article 13, Annex II
- Pressure equipment directive 2014/68/EU, Commission's Working Group "Pressure", Guideline A-05

Note:

A partial examination shall be performed for pressure instruments that are part of safety equipment for the protection of a pipe or vessel from exceeding allowable limits (safety accessory in accordance with Pressure Equipment Directive 2014/68/EU, Article 2, point 4).

The following also applies:

- PMP71 with thread and internal process membrane PN > 200 and oval flange adapter PN > 200: Suitable for stable gases in group 1, category I, module A
- PMP75 with pipe diaphragm seal $\geq 1.5"/\text{PN}40$: Suitable for stable gases in group 1, category II, module A2
- PMP75 with separators PN > 200 $\geq 1.5"/\text{PN}40$: Suitable for stable gases in group 1, category I, module A
- PMP75 with thread PN > 200: Suitable for stable gases in group 1, category I, module A

Manufacturer declarations

Depending on the desired configuration, the following documents can be ordered additionally with the device:

- FDA conformity
- TSE-free: materials free from animal origin
- Regulation (EC) No. 2023/2006 (GMP)
- Regulation (EC) No. 1935/2004 on materials and articles intended to come into contact with food

Downloading the Declaration of Conformity

Marine approval

- GL (German Lloyd)
- ABS

Ordering information:

Product Configurator, order code for "Additional options 1" or "Additional options 2", version "S".

Drinking water approval

PMC71/PMP71: NSF 61 approval

PMC71/PMP71: UBA/W270 approval (ordering information as for NSF approval: Product Configurator, order code for "Additional options 1" or "Additional options 2" option "F".)

Ordering information:

Product Configurator, order code for "Additional options 1" or Additional options 2", version "F".

Approvals for custody transfer

All aspects of OIML R117-1 Edition 2007 (E) and EN 12405-1/A1 Edition 2006 are fulfilled.

MID Parts Certificate

TC7975

Classification of process sealing between electrical systems and (flammable or combustible) process fluids in accordance with ANSI/ISA 12.27.01

Endress+Hauser devices are designed in accordance with ANSI/ISA 12.27.01, allowing the user to waive the use of - and save the cost of installing - external secondary process seals in the conduit as required by the process sealing sections of ANSI/NFPA 70 (NEC) and CSA 22.1 (CEC). These instruments comply with the North-American installation practice and provide a very safe and cost-saving installation for pressurized applications with hazardous fluids. Please refer to the following table for the seal class assigned (single seal or dual seal):

Device	Approval	Remark	Single seal MWP	Dual seal MWP
PMC71	CSA C/US IS, XP	W/o separate housing	-	60 bar (900 psi)
	CSA C/US IS	With separate housing	40 bar (600 psi)	-
PMP71	CSA C/US XP, XP+IS	W/o separate housing	400 bar (6 000 psi)	-
	CSA C/US IS	W/o separate housing	>200 to 400 bar (3 000 to 6 000 psi)	≤200 bar (3 000 psi)
	CSA C/US IS	With separate housing	400 bar (6 000 psi)	-
PMP75	XP, XP+IS	W/o separate housing	400 bar (6 000 psi)	-
	CSA C/US IS	W/o separate housing	>200 to 400 bar (3 000 to 6 000 psi)	≤200 bar (3 000 psi)
	CSA C/US IS	With separate housing	400 bar (6 000 psi)	-

Further information can be found in the control drawings of the relevant devices.

Service

Designation	Option ¹⁾ (not for 1-5V DC)
Cleaned of oil+grease ²⁾	HA
Cleaned for oxygen service ²⁾	HB
Cleaned of PWIS (paint-wetting impairment substances) ²⁾	HC

1) Product Configurator, order code for "Service"

2) Device only, not accessories or enclosed accessories.

Ordering information

Detailed ordering information is available from the following sources:

- In the Product Configurator on the Endress+Hauser website: www.endress.com -> Click "Corporate" -> Select your country -> Click "Products" -> Select the product using the filters and search field -> Open product page -> The "Configure" button to the right of the product image opens the Product Configurator.
- From your Endress+Hauser Sales Center: www.addresses.endress.com

Product Configurator - the tool for individual product configuration

- Up-to-the-minute configuration data
- Depending on the device: Direct input of measuring point-specific information such as measuring range or operating language
- Automatic verification of exclusion criteria
- Automatic creation of the order code and its breakdown in PDF or Excel output format
- Ability to order directly in the Endress+Hauser Online Shop

Special device versions

Endress+Hauser offers special device versions as **Technical Special Products (TSP)**.

For further information please contact your local Endress+Hauser Sales Center.

Scope of delivery

- Measuring device
- Optional accessories
- Brief Operating Instructions
- Calibration certificates
- Optional certificates

Measuring point (TAG)

Order code	895: Marking
Option	Z1: Tagging (TAG), see additional spec.
Position of the measuring point marking	To be selected in the additional specifications: ■ Tag plate Stainless Steel ■ Self-adhesive paper label ■ Supplied label/plate ■ RFID TAG ■ RFID TAG + Tag plate Stainless Steel ■ RFID TAG + Self-adhesive paper label ■ RFID TAG + Supplied label/plate
Definition of the measuring point designation	To be defined in the additional specifications: 3 lines containing up to 18 characters each The measuring point designation appears on the selected label and/or the RFID TAG.
Identification on electronic nameplate (ENP)	32 characters

Configuration data sheet

Pressure

The following configuration data sheet must be completed and included with the order if the option "E" or "H" has been selected in the Product Configurator, order code for "Calibration; Unit".

Pressure unit				
☐ mbar	☐ mmH ₂ O ¹⁾	☐ mmHg ²⁾	☐ Pascal	☐ torr
☐ bar	☐ mH ₂ O ¹⁾	☐ inHg ²⁾	☐ hPa	☐ g/cm ²
☐ psi	☐ ftH ₂ O ¹⁾	☐ gf/cm ²	☐ kPa	☐ kg/cm ²
	☐ inH ₂ O ¹⁾	☐ kgf/cm ²	☐ MPa	☐ lb/ft ²
				☐ atm

- 1) The conversion factor for the pressure unit is based on a reference temperature of 4 °C (39.2 °F).
- 2) The conversion factor of the pressure unit refers to a reference temperature of 0 °C (32 °F).

Calibration Range / Output	
Low range value (LRV):	_____ [Pressure engineering unit]
Upper range value (URV):	_____ [Pressure engineering unit]

Display
Display of the content of the main line (option depends on sensor and communication variant)
☐ Primary value [PV] (default)
☐ Main Value [%]
☐ Pressure
☐ Current [mA] (HART only)
☐ Temperature
☐ Error number
☐ Alternating display

Damping
Damping: _____ sec (Default 2 sec)

Smallest calibratable span (preset at factory) → 13

Level

The following configuration data sheet must be completed and included with the order if the option "F" or "T" has been selected in the Product Configurator, order code for "Calibration; Unit".

Pressure unit					Output unit (scaled unit)				
☐ mbar	☐ mmH ₂ O ¹⁾	☐ mmHg ²⁾	☐ Pascal	☐ torr	Mass	Lengths	Volume	Volume	Percent
☐ bar	☐ mH ₂ O ¹⁾	☐ inHg ²⁾	☐ hPa	☐ g/cm ²	☐ kg	☐ m	☐ l	☐ USgal	☐ %
☐ psi	☐ ftH ₂ O ¹⁾	☐ gf/cm ²	☐ kPa	☐ kg/cm ²	☐ t	☐ dm	☐ hl	☐ impgal	
	☐ inH ₂ O ¹⁾	☐ kgf/cm ²	☐ MPa	☐ lb/ft ²	☐ lb	☐ cm	☐ m ³	☐ USbblPE	
				☐ atm		☐ mm	☐ ft ³	TR	
						☐ ft			
						☐ inch			
Empty calibration [a]: Low pressure value (empty) _____ [Pressure engineering unit]					Empty calibration [a]: Low level value (empty) _____ [Scaled Unit]				
Full calibration [b]: High pressure value (full) _____ [Pressure engineering unit]					Full calibration [b]: High level value (full) _____ [Scaled Unit]				

Example

A 0 mbar / 0m
B 300 mbar (4.5 psi) / 3 m (9.8 ft)

A0020477

- 1) The conversion factor for the pressure unit is based on a reference temperature of 4 °C (39.2 °F).
2) The conversion factor of the pressure unit refers to a reference temperature of 0 °C (32 °F).

Display
Display of the content of the main line (option depends on sensor and communication variant)
☐ Primary value [PV] (default)
☐ Main Value [%]
☐ Pressure
☐ Current [mA] (HART only)
☐ Temperature
☐ Level before Lin.
☐ Tank content
☐ Error number
☐ Alternating display

Damping
Damping: _____ sec (Default 2 sec)

Accessories

HistoROM®/M-DAT

The HistoROM®/M-DAT is a memory module that can be attached to any electronic insert (not for 1-5V DC).

Ordering information:

Product Configurator, order code for "Additional options 1" or Additional options 2", version "N" or as a separate accessory (part no.: 52027785).

Welding flanges and weld-in adapters

For details, refer to TI00426F/00/EN "Weld-in adapters, process adapters and flanges".

Manifolds

See the →  78.

For further details, see SD01553P/00/EN "Mechanical accessories for pressure measuring devices".

Additional mechanical accessories

Oval flange adapters, pressure gauge valves, shutoff valves, siphons, condensate pots, cable shortening kits, test adapters, mounting brackets, flushing rings, block&bleed valves and protective roofs.

For details see SD01553P/00/EN "Mechanical accessories for pressure measuring devices".

Service-specific accessories

Accessories	Description
DeviceCare SFE100	Configuration tool for HART, PROFIBUS and FOUNDATION Fieldbus field devices  Technical Information TI01134S  DeviceCare is available for download at www.software-products.endress.com. You need to register in the Endress+Hauser software portal to download the application.
FieldCare SFE500	FDT-based plant asset management tool FieldCare can configure all smart field units in your plant and helps you manage them. By using the status information, FieldCare is also a simple but effective way of checking the status and condition of the field devices.  Technical Information TI00028S
Field Xpert SMT70, SMT77	The Field Xpert SMT70 tablet PC for device configuration enables mobile plant asset management in hazardous (Ex Zone 2) and non-hazardous areas. It is suitable for commissioning and maintenance staff. It manages Endress+Hauser and third-party field instruments with a digital communication interface and documents the progress of the work. The SMT70 is designed as a complete solution. It comes with a pre-installed driver library and is an easy-to-use, touch-enabled tool for managing field devices throughout their entire life cycle. The Field Xpert SMT77 for device configuration enables mobile plant asset management in areas categorized as Ex Zone 1. It is suitable for commissioning and maintenance staff for easy management of field instruments with a digital communication interface. The touch-enabled tablet PC is designed as a complete solution. It comes with comprehensive pre-installed driver libraries and offers users a modern software user interface to manage field instruments throughout the entire life cycle.
