Evaporative Cooling

- Heavy industrial
- Chemical processing, refining
- Power generation

**Counterflow Field-Erected Cooling Tower**—The ultimate in versatility, efficiency, and quality for large scale HVAC, power and industrial facilities. Each tower is customized to meet your exact specifications for performance, structure, drift, and sound. Available in pultruded structural fiberglass, wood (Douglas fir or redwood), or concrete for unsurpassed quality and reliability. Tower cells available from 1300 to 30,000 GPM.

**Crossflow Field-Erected Cooling Tower**—Large splash-fill towers proven in hundreds of installations over the last fifty years. Available in pultruded structural fiberglass or wood (Douglas fir or redwood) for unsurpassed quality and reliability. A variety of fill options makes this the most versatile tower for heavy industrial use. Tower cells available from 930 to 35,000 GPM.

**Round Forced-Draft Counterflow Cooling Tower**—Reduced power consumption, favorable space requirements, minimized recirculation effects, optimum operational behavior for salt water application and the aesthetic look are only some advantages of round concrete cooling towers with forced draft fans.

**Natural Draft Cooling Tower**—Concrete natural draft counterflow tower of varying sizes and configurations. Exceptionally efficient and reliable, most commonly used in power generation. Each tower is custom designed for flow rates up to 500,000 GPM or more.

Dry Cooling

➢ Power generation
➢ Steam condensing

**Air Cooled Condenser**—The modularized A-Frame design is used on power plants of all sizes. The integral features are long-term mechanical and thermal integrity, excellent corrosion and freeze resistance, low fan power consumption, reliable operation and low maintenance. Over 800 installations world-wide.

**Hexacool**® Air Cooled Condenser—Smaller power and industrial applications. Standardized modular system that is low cost, easy to erect and robust in performance.
AirFin™ Air Cooled Heat Exchangers—Innovative technology for petrochemical, process and power applications. AirFin heat exchangers have been designed, manufactured and supplied worldwide for over 40 years.

Wet-Dry Hybrid Cooling—The wet-dry hybrid cooling tower offers efficient cold water temperatures with reduced visible plume and enhanced water conservation.

Indirect Dry Cooling—An indirect dry natural draft condensing system, in the example above, couples a dry cooling tower with a steam surface condenser. Such a condensing system is particularly suited for large power plants. The concept can also be applied with mechanical draft dry towers over a wide range of plant sizes.

Special Applications

- Heavy industrial
- Chemical processing, refining
- Power generation
Marley Sigma Cooling Tower—These highly-efficient, low-maintenance towers offer a wide choice of solutions for medium to heavy industrial plants and large HVAC applications. Available in wood (Douglas fir or redwood), steel (stainless or galvanized), or pultruded structural fiberglass for unsurpassed quality and reliability. Tower cells range from 380 to 10,100 GPM capacities.

Marley CP Cooling Tower—Induced draft, counterflow cooling tower design. The ideal solution for larger space-sensitive applications. Its corrosion resistant fiberglass construction makes it an excellent alternative to stainless steel products. Available in Europe, the Middle East and Africa.

Marley MS Cooling Tower—For those installations where aesthetics preclude the use of a conventional cooling tower. Each tower is custom designed to meet the needs of the individual installation. Available in a wide range of flow rates.
Evaporative Cooling

- HVAC
- Refrigeration
- Light to medium industrial

Marley QuadraFlow® Cooling Tower—The first in the industry protected by a five-year total product warranty covering virtually every part of the tower. These fiberglass and stainless steel towers are field assembled to facilitate siting, and are available from 129 to 1,047 tons per cell. CTI Certified.

Marley NC® Alpha Cooling Tower—Splash-fill design for use at high temperature or where poor water quality prevents the use of film fill. Factory assembly and G-235 galvanized steel construction are standard. The all stainless steel option enhances the versatility of the NC Alpha. Tower cells available from 290 to 2,700 GPM.

Marley Series 10/Series 15 Cooling Tower—Splash-fill design for use at high temperature or where poor water quality prevents the use of film fill. Wood structure available in treated Douglas Fir or redwood. Tower cells available from 215 to 4,800 GPM.

Marley SRC Cooling Tower—Induced draft, counterflow design. Fiberglass field-erected structure. Stainless steel substructure option. Not available in the US, Canada or Europe.
**Evaporative Cooling**

- HVAC
- Refrigeration
- Light to medium industrial

---

**Marley AV Cooling Tower**—Singleflow, induced-draft crossflow design offers pump and fan energy savings in a small footprint installation. Factory assembly and G-235 galvanized steel construction are standard. Tower cells available from 117 to 390 tons per cell. The all stainless steel option enhances the versatility of the AV. CTI Certified.

---

**Marley MD Cooling Tower**—Counterflow, induced-draft design requires less plan area than crossflow towers. Factory assembly and G-235 galvanized steel construction are standard. Tower available from 165 to 500 tons per cell. The all stainless steel option enhances the versatility of the MD. Five-year mechanical equipment warranty. CTI Certified.

---

**Marley NC® Cooling Tower**—Five-year mechanical equipment warranty and guaranteed thermal performance. Factory assembly and G-235 galvanized steel construction are standard. Cells available from 101 to 1,439 tons per cell. The all stainless steel option enhances the versatility of the NC. Factory Mutual Approval available on all models and cell configurations. CTI Certified.

---

**Marley NCWD Wet-Dry Hybrid**—Coil based factory-assembled hybrid cooling tower designed to reduce visible plume and enhance water conservation.

Evaporative Cooling

- HVAC
- Refrigeration
- Light to medium industrial

Marley Aquatower® Cooling Tower—Reliable performance has made this design the industry standard for more than 60 years. G-235 galvanized steel factory assembled structure. Also available in 300 series stainless steel construction and fiberglass construction. Capacities from 8 to 126 tons per cell. CTI Certified.

Marley NC® Fiberglass Cooling Tower—Fiberglass and galvanized steel, field-erected, crossflow cooling tower designed to serve air conditioning and refrigeration systems as well as light or medium industrial process loads on clean water. Stainless steel structure option available. Cells available from 105 to 942 tons per cell. CTI Certified. Not available in the US, Canada or Europe.

Marley NX Fiberglass Cooling Tower—Fiberglass and galvanized steel, field-erected, crossflow cooling tower designed to serve air conditioning and refrigeration systems. Cells available from 121 to 379 tons per cell. GB/T 7190.1-2000 Certified. Not available in the US, Canada or Europe.

Marley MCW Cooling Tower—Maximizes forced-draft, counterflow technology and high-performance. The ideal solution for urban and industrial applications. Available in G-235 galvanized or 300 series stainless steel construction. Capacities from 142 to 489 tons per cell. CTI Certified.

Recold JT Cooling Tower—Forced-draft, low profile design. G-235 galvanized steel factory assembled structure. Also available in 300 series stainless steel. Capacities from 30 to 415 tons per cell.
Fluid Coolers

- HVAC
- Refrigeration
- Light to medium industrial

Marley MH Fluid Cooler—The MH Fluid Cooler with CoolBoost Technology is the most efficient system on the market. It incorporates fill media and more circuits of coil to increase performance as much as 10 percent over other systems and still maintain a space-saving footprint. CTI Certified.

Recold MW Fluid Cooler—Induced draft, counterflow design. G-235 galvanized steel factory assembled structure. Also available in 300 series stainless steel. Proven copper coil technology.

Marley MC Fluid Cooler—Forced draft, counterflow design. G-235 galvanized steel factory assembled structure. Also available in 300 series stainless steel. The ideal solution for sound- and space-sensitive applications.

cold JW Fluid Cooler—Forced-draft, low profile design. G-235 galvanized steel factory assembled structure. Also available in 300 series stainless steel. Proven copper coil technology.
Evaporative Condensers

› HVAC
› Refrigeration

Recold JC Evaporative Condenser—Forced-draft, low profile design. G-235 galvanized steel factory assembled structure. Also available in 300 series stainless steel. Proven copper coil technology.

Recold MC Evaporative Condenser—Induced draft, counterflow design. G-235 galvanized steel factory assembled structure. Also available in 300 series stainless steel. Proven copper coil technology.
You can count on us for your cooling parts. We design, manufacture, and stock all primary cooling components, including:

- Fans
- Gear boxes
- Driveshafts
- Belt drive components
- Fan cylinders
- Fill
- Nozzles
- Drift eliminators
- Valves
- Structural components

We are uniquely able to meet almost any repair or parts need on any size or type of cooling tower regardless of its age or manufacturer.

Note  SPX purchases and stocks specifically designed cooling tower motors
Reconstruction and Services

- Repair and reconstruction
- Inspections and condition reports
- Performance testing
- Extended Warranties

Let our reconstruction experts rebuild your tower to enhance its performance; whatever its manufacture; whether it’s large or small, crossflow or counterflow.

Cooling Tower Reconstruction  For many older towers, reconstruction is a cost-effective alternative to replacement. Our reconstruction experts work with our engineering staff to make old towers as good as new—if not better!

Concrete Tower Repair and Reconstruction  Our skilled task force of engineering, production and construction specialists stands ready to upgrade, refurbish and repair your concrete cooling tower, whether manufactured by Balcke, Marley or others. Tap into our extensive concrete experience—going back over 70 years to the very first concrete natural draft hyperbolic tower.

Inspections and Condition Reports  Our reconstruction specialists have been trained to analyze the condition of your cooling equipment—and its capability to be successfully repaired, rebuilt, or upgraded. Your SPX Cooling Technologies sales representative can arrange an inspection of your cooling system.

Maintenance  Let our cooling system experts help your maintenance experts. We can contract with you to provide as much “hands-on” maintenance assistance as you need.

Performance Testing  You can’t know how much any reconstruction effort has improved your tower unless you know how your tower is performing now. Our staff of Testing and Ratings Engineers can help you to gain that vital information.
Temporary Cooling

- Disaster response
- Maintenance outages
- Repair/replacement cooling

A sense of urgency that gives new meaning to the word “fleet.”

In this business, every minute of cool water flow, and every minute variation in water temperature counts, regardless of whether you provide emergency backup or increase production capacity. Because it all equates to profits.

Marley Temporary Cooling Solutions is geared entirely toward making your performance our priority—including a fleet of ultra-efficient induced-draft towers, and regional support teams who are on the ground and ready to move. Currently available in North America only.
Biomega Systems

- Municipal wastewater
- Industrial wastewater
- Upgrade existing rock trickling filters

Currently available in North America only.

The Marley Biomega System – A set of products specially designed to work together for waste water treatment applications. Make your projects and expansions as simple as possible with MarDek, MarGrid, MarPier, and MarPak.

MarPier™ – A specialized support system for the Biomega System that can be configured to accommodate various media loads, support heights, and floor slopes. MarPier provides a firm foundation for all common filter configurations. MarPier installs quickly and is designed specifically to be used in conjunction with MarDek to provide a strong, versatile, and reliable support for years of trouble-free operation.

MarDek™ – A high-strength grating support system designed to accommodate all loads associated with trickling filter operation. With cross-bar construction, MarDek allows the grating panel to be easily cut and modified to fit almost any tank configuration. MarDek can be supported by MarPier, concrete piers, or concrete blocks.

MarPak™ – A modular PVC corrugated fill media specifically designed for biological treatment applications as part of the Biomega System.
